With Garmin’s GNS 530, your customers can meet the FAA’s mandate for a whole lot less. As you know, the FAA has mandated installation of Class B TAWS on business jets or turboprops with six or more passenger seats. But the good news is: (1) It’s valuable life-saving technology, and (2) it doesn’t have to cost a fortune. With Garmin’s GNS 530 integrated GPS/Comm/Nav series, you can offer the certified TAWS-B terrain capability your customers need – at a surprisingly down-to-earth price. Better yet, if they already own a GNS 530, it’s easy to upgrade to TAWS-B compliance for a fraction of the cost of competitive add-ons. In one 5-inch box, users get the database mapping and color terrain displays of those high-end ground-prox systems – plus all the IFR navigation and communication features of the best-selling GPS panel-mount line in business aviation. Installing TAWS? The smart money’s going with Garmin.
