

FULL-SPECTRUM SERVICES FOR MANAGING FLIGHT OPERATIONS

FitPlan.com
A Garmin Company

With integrated aviation products and services from the industry-leading FitPlan.com team at Garmin, pilots and fleet owners can streamline their operations with a full suite of proven logistics solutions. These offerings provide everything from basic flight planning and filing to integrated safety management and trip support tools.

FLIGHT PLANNING

As one of the largest and most trusted electronic flight planning services in North America, FitPlan.com files more flight plans per year than any other provider. Seamless interface with the Garmin Pilot™ app enables pilots to access, edit and file flight plan data directly from their mobile devices.

FLIGHT SCHEDULING

Master your flight scheduling with FitLogic, the only flight scheduling program that integrates with FitPlan.com. FitLogic offers a comprehensive suite of features from trip requests and approvals to flight planning and postflight reporting to meet your complex and changing needs.

FLEET MANAGEMENT

FitPlan Manager is an integrated, web-based fleet tracking program designed specifically for charter operations, large flight departments and fractionals. FitPlan Manager gives you insight into and control of your fleet from a single administrative account.

RUNWAY ANALYSIS

FitPlan runway analysis gives aircraft operators optimal calculations to enhance the safety and efficiency of takeoffs — while often enabling departures at heavier gross weights than traditional performance calculations may allow.

INTERNATIONAL TRIP SUPPORT

FitPlan eAPIS service simplifies manifest submissions for your international trips. In addition to eAPIS for the U.S., this service offers Mexican and CARICOM APIS. Because the FitPlan eAPIS and APIS services are integrated with your FitPlan account, you'll know if a manifest submission is required for your trip when you create your flight plan.

To further simplify logistics, FitPlan offers international handling for Mexico, Central America and the Caribbean — taking care of any airspace fees, overflight and landing permits, aeronautical planning to identify preferred routes, recommended airports of landing and more. You can breeze through arrival formalities with ground handling services, lodging and transportation all arranged. No surprise bills or hidden fees

GARMIN®

FULL-SPECTRUM SERVICES FOR MANAGING FLIGHT OPERATIONS

RISK MANAGEMENT

Our FitPlan Safety Management System (SMS) provides you with the tools necessary to create a safety culture based on oversight and risk mitigation. Features and tools are designed to encompass the key functional components of safety policy, safety risk management, safety assurance and safety promotion.

Our SMS integrates with FitPlan.com and lets you create multiple, custom FRATs to accommodate the unique flying needs of your operation. Records and documents are stored on FitPlan secure servers for easy access by your team or for compliance verification.

DOT COM (DCM) CALL SIGNS

For increased privacy and security, jets and turboprops can fly using a DCM call sign, allowing you to select from assigned and random call signs at will. As an FAA-approved provider, the FitPlan DCM Call Sign program meets the requirement for participation in the FAA's Privacy ICAO Address program.

FLIGHT TRACKING

An affordable FitPlan.com flight tracking solution allows support personnel to privately monitor your aircraft's progress en route. Real-time ATC information, including departure/arrival airports, aircraft type, departure/arrival time, altitude, and groundspeed can be displayed.

PREDEPARTURE CLEARANCE (PDC)

For jets and turboprops not equipped with a datalink, PDCs are an efficient and hassle-free alternative to verbal clearance delivery. PDC clearances are currently available for IFR flight plans at 73 airports and can be received via email or text and in your FitPlan.com account.

GARMIN PILOT™ APP

Turn your tablet or phone into the ideal cockpit companion. The Garmin Pilot app puts full-featured navigation — including our decades of experience with rich, interactive mapping, 3D Vision, aviation weather, global flight plan filing, electronic flight bag capabilities, optional traffic/weather, pilot logbook and more — right at your fingertips.
