

INREACH®

TRACK. COMMUNICATE. STAY CONNECTED.

Garmin inReach devices work around the world. With two-way text messaging, fleet and pilot tracking and a professional management website, inReach is a complete aviation communications and tracking solution. Additional inReach professional features allow you to integrate with third-party platforms to fully customize your experience.

DISCOVER THE INREACH DIFFERENCE

Professional inReach Solutions Offer These Essential Aviation Capabilities¹:

Global Two-Way Communication

Send and receive custom and preset text messages or emails between aircraft, dispatch and contacts. Delivery confirmation lets you know your message has been received.

Fleet/Pilot Tracking

View and monitor aircraft in real time via a single cloud-based topographic map customizable with tail numbers and names.

Location referencing allows dispatch to locate an aircraft and send locations of interest directly to the aircraft's inReach device.

GPS Navigation and Tracking

Utilize live tracking and adjust your tracking intervals as needed. Optional auto power on/off and auto tracking offer a convenient and hands-off solution for pilots.

100% Global Iridium® Satellite Network

Iridium is the world's furthest reaching satellite network—providing service around the globe.

Professional Management Website

The complete inReach system provides a robust back-office management website for administering a fleet of devices, centralized billing, controlling device settings and configurations and other account management features.

Mobile Apps

Pair a compatible³ inReach device with the Garmin Pilot app for seamless texting and GPS reception from the inReach to a tablet or smartphone. To control additional inReach-specific capabilities from a compatible⁴ mobile device, pair your inReach to your mobile device via a companion app.

Custom Solutions and API

Utilize the Garmin inReach API to integrate inReach data with your platform or third-party tracking solution.

Weather Forecasts

Get weather forecasts directly on your inReach device to make educated decisions in the field. Request inReach weather forecasts² or use the two-way text messaging capabilities to access third-party weather reporting.

Professional SOS Monitoring

In case of emergency, trigger an interactive SOS message inside or outside an aircraft. GEOS, a professional 24/7 global monitoring center, will coordinate a response and communicate with you and your emergency contacts until the situation is resolved.

Organizations can design a custom SOS protocol to better serve their teams, as well as assist response efforts during an SOS incident.

MONITOR AIRCRAFT AND STAY IN TOUCH WITH PILOTS AROUND THE GLOBE

Communicate Globally with the Iridium® Satellite Network

Two-way text messaging allows for pilots to stay in contact with other aircraft, dispatch and third-parties. Unlike a one-way ELT device, it also allows a pilot to communicate directly with GEOS, emergency responders and other contacts during an SOS.

inReach satellite communicators operate on the Iridium satellite network — a constellation of 66 low Earth orbit (LEO) satellites — with no fringe zones or blackout areas. It's the only network that lets you stay in touch around the world.

Track Multiple Aircraft from One Central Location

Use the Garmin Explore™ administrative website to monitor the location of all inReach devices on your account on a single map. You can also message the inReach devices directly from the website.

Share the map view with others by using the Garmin inReach API to integrate inReach tracking data with a third-party solution or set up a sharable MapShare™ web page through your Garmin Explore account. Use the MapShare settings to specify a custom url, update privacy settings and filter the information you choose to display.

EASILY MANAGE SATELLITE SUBSCRIPTIONS WITH PROFESSIONAL FLEX PLANS

- Professional Flex plans are month-to-month and only require only a 30-day commitment
- Options to pay by credit card or net-30 invoicing terms⁵
- Centralized billing on one account
- Suspend service in the off-season, when your needs change or when an aircraft is down for maintenance
- Move up or down a plan for free when your needs change
- Dedicated professional product support and sales teams

Organizations in Many Industries Are Choosing inReach

- | | |
|---|--|
| • Aviation | • Humanitarian Aid Organizations |
| • Outdoor Outfitters | • Forestry, Wildland Fire and Environmental Services |
