## Index
Introduction

WARNING

See the Important Safety and Product Information guide in the product box for product warnings and other important information.

Always consult your physician before you begin or modify any exercise program.

Device Overview

1 LIGHT
   Select to turn the backlight on and off. Hold to view the controls menu. Hold to turn the device on.

2 
   Select to view the activity list and start or stop an activity. Select to choose an option in a menu.

3 BACK LAP
   Select to return to the previous screen. Select to record a lap, rest, or transition during a multisport activity.

4 DOWN
   Select to scroll through the widget loop and menus. Hold to view the watch face from any screen.

5 UP MENU
   Select to scroll through the widget loop and menus. Hold to view the menu.

Viewing the Controls Menu

The controls menu contains options, such as turning on do not disturb mode, locking the keys, and turning the device off.

NOTE: You can add, reorder, and remove the options in the controls menu (Customizing the Controls Menu, page 25).

1 From any screen, hold LIGHT.

2 Select UP or DOWN to scroll through the options.

Viewing Widgets

Your device comes preloaded with several widgets, and more are available when you pair your device with a smartphone.

- Select UP or DOWN.
  The device scrolls through the widget loop.
- Select \( \uparrow \) to view additional options and functions for a widget.
- From any screen, hold BACK to return to the watch face.

- If you are recording an activity, select BACK to return to the activity data pages.

Charging the Device

WARNING

This device contains a lithium-ion battery. See the Important Safety and Product Information guide in the product box for product warnings and other important information.

NOTICE

To prevent corrosion, thoroughly clean and dry the contacts and the surrounding area before charging or connecting to a computer. Refer to the cleaning instructions in the appendix.

1 Plug the small end of the USB cable into the charging port on your device.

2 Plug the large end of the USB cable into a USB charging port.

3 Charge the device completely.

Pairing Your Smartphone with Your Device

To use the connected features of the fenix device, it must be paired directly through the Garmin Connect Mobile app, instead of from the Bluetooth settings on your smartphone.

1 From the app store on your smartphone, install and open the Garmin Connect Mobile app.

2 Bring your smartphone within 10 m (33 ft.) of your device.

3 Select LIGHT to turn on the device. The first time you turn on the device, it is in pairing mode.

TIP: You can hold LIGHT and select \( \uparrow \) to manually enter pairing mode.

4 Select an option to add your device to your Garmin Connect account:
- If this is the first time you are pairing a device with the Garmin Connect Mobile app, follow the on-screen instructions.
- If you already paired another device with the Garmin Connect Mobile app, from the Garmin Devices menu, select Garmin Devices > Add Device, and follow the on-screen instructions.

Product Updates

On your computer, install Garmin Express™ (www.garmin.com/express). On your smartphone, install the Garmin Connect Mobile app.

This provides easy access to these services for Garmin® devices:
- Software updates
- Data uploads to Garmin Connect
- Product registration
Setting Up Garmin Express
1 Connect the device to your computer using a USB cable.
2 Go to www.garmin.com/express.
3 Follow the on-screen instructions.

Activities and Apps
Your device can be used for indoor, outdoor, athletic, and fitness activities. When you start an activity, the device displays and records sensor data. You can save activities and share them with the Garmin Connect community.
You can also add Connect IQ™ activities and apps to your device using the Connect IQ website (Connect IQ Features, page 8).
For more information about activity tracking and fitness metric accuracy, go to garmin.com/ataccuracy.

Starting an Activity
When you start an activity, GPS turns on automatically (if required). When you stop the activity, the device returns to watch mode.
1 From the watch face, select UP.
2 Select an activity.
3 If necessary, follow the on-screen instructions to enter additional information.
4 If necessary, wait while the device connects to your ANT+® sensors.
5 If the activity requires GPS, go outside, and wait while the device locates satellites.
6 Select UP to start the timer.
NOTE: The device does not record your activity data until you start the timer.

Tips for Recording Activities
• Charge the device before starting an activity (Charging the Device, page 1).
• Select LAP to record laps.
• Select UP or DOWN to view additional data pages.

Stopping an Activity
1 Select UP.
2 Select an option:
• To resume your activity, select Resume.
• To save the activity and return to watch mode, select Save.
• To suspend your activity and resume it at a later time, select Resume Later.
• To mark a lap, select Lap.
• To navigate back to the starting point of your activity along the path you traveled, select Back to Start > TracBack.
NOTE: This feature is available only for activities that use GPS.
• To navigate back to the starting point of your activity by the most direct path, select Back to Start > Straight Line.
NOTE: This feature is available only for activities that use GPS.
• To discard the activity and return to watch mode, select Discard > Yes.
NOTE: After stopping the activity, the device saves it automatically after 30 minutes.

Adding or Removing a Favorite Activity
The list of your favorite activities appears when you press UP from the watch face, and it provides quick access to the activities you use most. The first time you press UP to start an activity, the device prompts you to select your favorite activities. You can add or remove favorite activities at any time.
1 Hold MENU.
2 Select Settings > Activities & Apps.
Your favorite activities appear at the top of the list with a white background. Other activities appear with a black background.
3 Select an option:
• To add a favorite activity, select the activity, and select Set as Favorite.
• To remove a favorite activity, select the activity, and select Remove from Favorites.

Creating a Custom Activity
1 From the watch face, select UP > Add.
2 Select an option:
• Select Copy Activity to create your custom activity starting from one of your saved activities.
• Select Other to create a new custom activity.
3 If necessary, select an activity type.
4 Select a name or enter a custom name.
Duplicate activity names include a number, for example: Bike(2).
5 Select an option:
• Select an option to customize specific activity settings. For example, you can select an accent color or customize the data screens.
• Select Done to save and use the custom activity.
6 Select Yes to add the activity to your list of favorites.

Indoor Activities
The fēnix device can be used for training indoors, such as running on an indoor track or using a stationary bike. GPS is turned off for indoor activities.
When running or walking with GPS turned off, speed, distance, and cadence are calculated using the accelerometer in the device. The accelerometer is self-calibrating. The accuracy of the speed, distance, and cadence data improves after a few outdoor runs or walks using GPS.
TIP: Holding the handrails of the treadmill reduces accuracy. You can use an optional foot pod to record pace, distance, and cadence.
When cycling with GPS turned off, speed and distance are not available unless you have an optional sensor that sends speed and distance data to the device (such as a speed or cadence sensor).

Calibrating the Treadmill Distance
To record more accurate distances for your treadmill runs, you can calibrate the treadmill distance after you run at least 1.5 km (1 mi.) on a treadmill. If you use different treadmills, you can manually calibrate the treadmill distance on each treadmill or after each run.
1 Start a treadmill activity (Starting an Activity, page 2), and run at least 1.5 km (1 mi.) on the treadmill.
2 After you complete your run, select UP.
3 Select an option:
• To calibrate the treadmill distance the first time, select Save.
The device prompts you to complete the treadmill calibration.

- To manually calibrate the treadmill distance after the first-time calibration, select **Calibrate & Save > Yes**.

4 Check the treadmill display for the distance traveled, and enter the distance on your device.

**Recording a Strength Training Activity**

You can record sets during a strength training activity. A set is multiple repetitions (reps) of a single move.

1 From the watch face, select **& > Strength**.
   The first time you record a strength training activity, you will select which wrist your watch is on.

2 Select **Start** to start the set timer.

3 Start your first set.
   The device counts your reps. Your rep count appears when you complete at least six reps.
   **TIP:** The device can only count reps of a single move for each set. When you want to change moves, you should finish the set and start a new one.

4 Select **LAP** to finish the set.
   The watch displays the total reps for the set. After several seconds, the rest timer appears.

5 If necessary, hold **MENU**, select **Edit Last Set**, and edit the number of reps.
   **TIP:** You can also add the weight used for the set.

6 When you are done resting, select **LAP** to start your next set.

7 Repeat for each strength training set until your activity is complete.

8 After your last set, select **Start** to stop the set timer.

9 Select **Save**.

**Outdoor Activities**

The fenix device comes preloaded with outdoor activities, such as running and cycling. GPS is turned on for outdoor activities. You can add new activities based on default activities, such as walking or rowing. You can also add custom activities to your device (**Creating a Custom Activity, page 2**).

**Viewing Your Ski Runs**

Your device records the details of each downhill skiing or snowboarding run using the auto run feature. This feature is turned on by default for downhill skiing and snowboarding. It automatically records new ski runs based on your movement. The timer pauses when you stop moving downhill and when you are on a chairlift. The timer remains paused during the chairlift ride. You can start moving downhill to restart the timer. You can view run details from the paused screen or while the timer is running.

1 Start a skiing or snowboarding activity.

2 Hold **MENU**.

3 Select **View Runs**.

4 Select **UP** and **DOWN** to view details of your last run, your current run, and your total runs.
   The run screens include time, distance traveled, maximum speed, average speed, and total descent.

**Using the Metronome**

The metronome feature plays tones at a steady rhythm to help you improve your performance by training at a faster, slower, or more consistent cadence.

**NOTE:** This feature is not available for all activities.

1 From the watch face, select **Start**.

2 Select an activity.

3 Hold **MENU**.

4 Select the activity settings.

5 Select **Metronome > Status > On**.

6 Select an option:
   - **Select Beats / Min** to enter a value based on the cadence you want to maintain.
   - **Select Alert Frequency** to customize the frequency of the beats.
   - **Select Sounds** to customize the metronome tone and vibration.

7 If necessary, select **Preview** to listen to the metronome feature before you run.

8 Go for a run (**Starting an Activity, page 2**).
   The metronome starts automatically.

9 During your run, select **UP** or **DOWN** to view the metronome screen.

10 If necessary, hold **MENU** to change the metronome settings.

**Jumpmaster**

**WARNING**

The jumpmaster feature is for use by experienced skydivers only. The jumpmaster feature should not be used as a primary skydiving altimeter. Failure to input the appropriate jump related information can lead to serious personal injury or death.

The jumpmaster feature follows military guidelines for calculating the high altitude release point (HARP). The device detects automatically when you have jumped to begin navigating toward the desired impact point (DIP) using the barometer and electronic compass.

**Multisport**

Triathletes, duathletes, and other multisport competitors can take advantage of the multisport activities, such as Triathlon or Swimrun. During a multisport activity, you can transition between activities and continue to view your total time and distance. For example, you can switch from biking to running and view your total time and distance for biking and running throughout the multisport activity.

You can customize a multisport activity, or you can use the default triathlon activity set up for a standard triathlon.

**Creating a Multisport Activity**

1 From the watch face, select **& > Add > Multisport**.

2 Select a multisport activity type, or enter a custom name.
   Duplicate activity names include a number. For example, Triathlon(2).

3 Select two or more activities.

4 Select an option:
   - Select an option to customize specific activity settings. For example, you can select whether to include transitions.
   - Select **Done** to save and use the multisport activity.

5 Select **Yes** to add the activity to your list of favorites.

**Tips for Triathlon Training or Using Multisport Activities**

- **Select Start** to start your first activity.
- **Select LAP** to transition to the next activity.
- If transitions are turned on, the transition time is recorded separately from the activity times.
- If necessary, select **LAP** to start the next activity.
- **Select UP** or **DOWN** to view additional data pages.
Swimming

NOTE
The device is intended for surface swimming. Scuba diving with the device may damage the product and will void the warranty.

NOTE: The device cannot record wrist heart rate data while swimming.

NOTE: The device is compatible with the HRM-Tri™ accessory and the HRM-Swim™ accessory (Heart Rate While Swimming, page 9).

Swim Terminology
Length: One trip down the pool.
Interval: One or more consecutive lengths. A new interval starts after a rest.
Stroke: A stroke is counted every time your arm wearing the device completes a full cycle.
Swolf: Your swolf score is the sum of the time for one pool length and the number of strokes for that length. For example, 30 seconds plus 15 strokes equals a swolf score of 45. For open water swimming, swolf is calculated over 25 meters. Swolf is a measurement of swimming efficiency and, like golf, a lower score is better.

Stroke Types
Stroke type identification is available only for pool swimming. Your stroke type is identified at the end of a length. Stroke types appear when you are viewing interval history. You can also select stroke type as a custom data field (Customizing the Data Screens, page 22).

</table>

Tips for Swimming Activities
- Before starting a pool swimming activity, follow the on-screen instructions to select your pool size or enter a custom size.
- The next time you start a pool swimming activity, the device uses this pool size. You can hold MENU, select the activity settings, and select Pool Size to change the size.
- Select LAP to record a rest during pool swimming. The device automatically records swim intervals and lengths for pool swimming.
- Select LAP to record an interval during open water swimming.

Resting During Pool Swimming
The default rest screen displays two rest timers. It also displays time and distance for the last completed interval.

NOTE: Swim data is not recorded during a rest.
1. During your swim activity, select LAP to start a rest.
   - The display reverses to white text on a black background, and the rest screen appears.
2. During a rest, select UP or DOWN to view other data screens (optional).
3. Select LAP, and continue swimming.
4. Repeat for additional rest intervals.

Training with the Drill Log
The drill log feature is available only for pool swimming. You can use the drill log feature to manually record kick sets, one-arm swimming, or any type of swimming that is not one of the four major strokes.

1. During your pool swim activity, select UP or DOWN to view the drill log screen.
2. Select LAP to start the drill timer.
3. After you complete a drill interval, select LAP.
   - The drill timer stops, but the activity timer continues to record the entire swim session.
4. Select a distance for the completed drill. Distance increments are based on the pool size selected for the activity profile.
5. Select an option:
   - To start another drill interval, select LAP.
   - To start a swim interval, select UP or DOWN to return to the swim training screens.

Golfing

Downloading Golf Courses
Before you play a course for the first time, you must download it using the Garmin Connect Mobile app.
1. From the Garmin Connect Mobile app, select Download Golf Courses.
2. Select a golf course.
3. Select Download.
   - After the course finishes downloading, it appears in the list of courses on your fēnix device.

Playing Golf
Before you play a course for the first time, you must download it from the Garmin Connect Mobile app (Garmin Connect, page 6). Courses downloaded from the Garmin Connect Mobile app are updated automatically.

Before you play golf, you should charge the device (Charging the Device, page 1).
1. From the watch face, select Golf.
2. Go outside, and wait while the device locates satellites.
3. Select a course from the list of available courses.
4. Select Yes to keep score.
5. Select UP or DOWN to scroll through the holes.
   - The device automatically transitions when you move to the next hole.
6. After you complete your activity, select End Round > Yes.

Hole Information
Because pin locations change, the device calculates the distance to the front, middle, and back of the green, but not the actual pin location.

<p>| | | | | |</p>

</tr>
</tbody>
</table>
Moving the Flag
You can take a closer look at the green and move the pin location.
1. From the hole information screen, select Move Flag.
2. Select UP or DOWN to move the pin position.
3. Select to select a hole.
The distances on the hole information screen are updated to show the new pin position. The pin location is saved for only the current round.

Viewing Hazards
You can view distances to hazards along the fairway for par 4 and 5 holes. Hazards that affect shot selection are displayed individually or in groups to help you determine the distance to layup or carry.
1. From the hole information screen, select Hazards.
   • The distances to the front and back of the nearest hazard appear on the screen.
   • The hazard type is listed at the top of the screen.
   • The green is represented as a half circle at the top of the screen. The line below the green represents the center of the fairway.
   • Hazards are shown below the green in approximate locations relative to the fairway.
2. Select UP or DOWN to view other hazards for the current hole.

Viewing Measured Shots
Before the device can automatically detect and measure shots, you must enable scoring.
Your device features automatic shot detection and recording. Each time you take a shot along the fairway, the device records your shot distance so you can view it later.
TIP: Automatic shot detection works best when you wear the device on your leading wrist and make good contact with the ball. Putts are not detected.
1. While playing golf, select Measure Shot.
   Your last shot distance appears.
   NOTE: The distance automatically resets when you hit the ball again, putt on the green, or move to the next hole.
2. Select DOWN to view all recorded shot distances.

Viewing Layup and Dogleg Distances
You can view a list of layup and dogleg distances for par 4 and 5 holes.
Select Layups.
Each layup and the distance until you reach each layup appear on the screen.
NOTE: Distances are removed from the list as you pass them.

Keeping Score
1. From the hole information screen, select Scorecard.
The scorecard appears when you are on the green.
2. Select UP or DOWN to scroll through the holes.
3. Select to select a hole.
4. Select UP or DOWN to set the score.
   Your total score is updated.

Updating a Score
1. From the hole information screen, select Scorecard.
2. Select UP or DOWN to scroll through the holes.
3. Select to select a hole.
4. Select UP or DOWN to change the score for that hole.
   Your total score is updated.

TruSwing™
The TruSwing feature allows you to view swing metrics recorded from your TruSwing device. Go to www.garmin.com/golf to purchase a TruSwing device.

Using the Golf Odometer
You can use the odometer to record the time, distance, and steps traveled. The odometer automatically starts and stops when you start or end a round.
1. Select Odometer.
2. If necessary, select Reset to reset the odometer to zero.

Tracking Statistics
The Stat Tracking feature enables detailed statistics tracking while playing golf.
1. From the hole information screen, hold MENU.
2. Select the activity settings.
3. Select Stat Tracking to enable tracking statistics.

Connected Features
Connected features are available for your fēnix device when you connect the device to a compatible smartphone using Bluetooth wireless technology. Some features require you to install the Garmin Connect Mobile app on the connected smartphone. Go to www.garmin.com/apps for more information. Some features are also available when you connect your device to a wireless network.

Phone notifications: Displays phone notifications and messages on your fēnix device.
LiveTrack: Allows friends and family to follow your races and training activities in real time. You can invite followers using email or social media, allowing them to view your live data on a Garmin Connect tracking page.
GroupTrack: Allows you to keep track of your connections using LiveTrack directly on screen and in real time.
Activity uploads to Garmin Connect: Automatically sends your activity to your Garmin Connect account as soon as you finish recording the activity.
Connect IQ: Allows you to extend your device features with new watch faces, widgets, apps, and data fields.
Software Updates: Allows you to update your device software.
Weather: Allows you to view current weather conditions and weather forecasts.
Bluetooth sensors: Allows you to connect Bluetooth compatible sensors, such as a heart rate monitor.
Find my phone: Locates your lost smartphone that is paired with your fēnix device and currently within range.
Find my device: Locates your lost fēnix device that is paired with your smartphone and currently within range.

Connected Features
Enabling Bluetooth Notifications
Before you can enable notifications, you must pair the fēnix device with a compatible mobile device (Pairing Your Smartphone with Your Device, page 1).

1 Hold MENU.
2 Select Settings > Phone > Smart Notifications > Status > On.
3 Select During Activity.
4 Select a notification preference.
5 Select a sound preference.
6 Select Not During Activity.
7 Select a notification preference.
8 Select a sound preference.
9 Select Timeout.
10 Select the amount of time the alert for a new notification appears on the screen.

Viewing Notifications
1 From the watch face, select UP to view the notifications widget.
2 Select , and select a notification.
3 Select DOWN for more options.
4 Select BACK to return to the previous screen.

Receiving an Incoming Phone Call
When you receive a phone call on your connected smartphone, the fēnix device displays the name or phone number of the caller. You can accept or decline the call. If your device is connected to a smartphone with Android™, you can also decline with a text message by selecting from a list of messages on your fēnix device.
• To accept the call, select Accept.
• To decline the call, select Decline.
• To decline the call and immediately send a text message reply, select Reply, and select a message from the list.

Replying to a Text Message
NOTE: This feature is available only for smartphones with Android.
When you receive a text message notification on your fēnix device, you can send a quick reply by selecting from a list of messages. You can customize messages in the Garmin Connect Mobile app.
NOTE: This feature sends text messages using your phone. Regular text message limits and charges from your carrier and phone plan may apply. Contact your mobile carrier for more information about text message charges or limits.
1 From the watch face, select UP to view the notifications widget.
2 Select , and select a text message notification.
3 Select DOWN > Reply.
4 Select a message from the list.
Your phone sends the selected message as an SMS text message.

Managing Notifications
You can use your compatible smartphone to manage notifications that appear on your fēnix 5/5S device.

Select an option:
• If you are using an Apple® smartphone, use the notifications settings on your smartphone to select the items to show on the device.
• If you are using a smartphone with Android, from the Garmin Connect Mobile app, select Settings > Smart Notifications.

Turning Off the Bluetooth Smartphone Connection
1 Hold LIGHT to view the controls menu.
2 Select to turn off the Bluetooth smartphone connection on your fēnix device.
Refer to the owner's manual for your mobile device to turn off Bluetooth wireless technology on your mobile device.

Turning On and Off Smartphone Connection Alerts
You can set the fēnix 5/5S device to alert you when your paired smartphone connects and disconnects using Bluetooth wireless technology.
NOTE: Smartphone connection alerts are turned off by default.
1 Hold MENU.
2 Select Settings > Phone > Alerts.

Locating a Lost Mobile Device
You can use this feature to help locate a lost mobile device that is paired using Bluetooth wireless technology and currently within range.
1 Hold LIGHT to view the controls menu.
2 Select Bluetooth Alerts.
The fēnix device begins searching for your paired mobile device. An audible alert sounds on your mobile device, and the Bluetooth signal strength displays on the fēnix device screen. The Bluetooth signal strength increases as you move closer to your mobile device.
3 Select BACK to stop searching.

Garmin Connect
Your Garmin Connect account allows you to track your performance and connect with your friends. It gives you the tools to track, analyze, share, and encourage each other. You can record the events of your active lifestyle, including runs, walks, rides, swims, hikes, golf games, and more.
You can create your free Garmin Connect account when you pair your device with your phone using the Garmin Connect Mobile app. You can also create an account when you set up the Garmin Express application (www.garmin.com/express).

Store your activities: After you complete and save a timed activity with your device, you can upload that activity to your Garmin Connect account and keep it as long as you want.

Analyze your data: You can view more detailed information about your fitness and outdoor activities, including time, distance, heart rate, calories burned, cadence, an overhead map view, and pace and speed charts. You can view more detailed information about your golf games, including scorecards, statistics, and course information. You can also view customizable reports.
NOTE: To view some data, you must pair an optional wireless sensor with your device (Pairing Your Wireless Sensors, page 27).
Track your progress: You can track your daily steps, join a friendly competition with your connections, and meet your goals.

Share your activities: You can connect with friends to follow each other's activities or post links to your activities on your favorite social networking sites.

Manage your settings: You can customize your device and user settings on your Garmin Connect account.

Updating the Software Using Garmin Connect Mobile
Before you can update your device software using the Garmin Connect Mobile app, you must have a Garmin Connect account, and you must pair the device with a compatible smartphone (Pairing Your Smartphone with Your Device, page 1).

Synchronize your device with the Garmin Connect Mobile app (Manually Syncing Data with Garmin Connect Mobile, page 7).

When new software is available, the Garmin Connect Mobile app automatically sends the update to your device.

Updating the Software Using Garmin Express
Before you can update your device software, you must download and install the Garmin Express application and add your device (Using Garmin Connect on Your Computer, page 7).

1. Connect the device to your computer using the USB cable. When new software is available, the Garmin Express application sends it to your device.

2. After the Garmin Express application finishes sending the update, disconnect the device from your computer. Your device installs the update.

Using Garmin Connect on Your Computer
The Garmin Express application connects your device to your Garmin Connect account using a computer. You can use the Garmin Express application to upload your activity data to your Garmin Connect account and to send data, such as workouts or training plans, from Garmin Connect website to your device. You can also install device software updates and manage your Connect IQ apps.

1. Connect the device to your computer using the USB cable.

2. Go to www.garmin.com/express.

3. Download and install the Garmin Express application.

4. Open the Garmin Express application, and select Add Device.

5. Follow the on-screen instructions.

Manually Syncing Data with Garmin Connect Mobile

1. Hold LIGHT to view the controls menu.

2. Select C.

Garmin Golf™ App
The Garmin Golf app allows golfers to compete with each other at different courses. More than 41,000 courses have a weekly leaderboard that anyone can join. You can set up a tournament event and invite players to compete. You can upload scorecards from your compatible Garmin device to view detailed statistics and shot analyses.

The Garmin Golf app syncs your data with your Garmin Connect account. You can download the Garmin Golf app from the app store on your smartphone.

Starting a GroupTrack Session
Before you can start a GroupTrack session, you must have a Garmin Connect account, a compatible smartphone, and the Garmin Connect Mobile app.

These instructions are for starting a GroupTrack session with fēnix 5/5S devices. If your connections have other compatible devices, you can see them on the map. The other devices may not be able to display GroupTrack riders on the map.

1. Go outside, and turn on the fēnix 5/5S device.

2. Pair your smartphone with the fēnix 5/5S device (Pairing Your Smartphone with Your Device, page 1).

3. On the fēnix 5/5S device, hold MENU, and select Settings > GroupTrack > Show on Map to enable viewing connections on the map screen.

4. In the Garmin Connect Mobile app, from the settings menu, select LiveTrack > GroupTrack.

5. If you have more than one compatible device, select a device for the GroupTrack session.

6. Select Visible to > All Connections.

7. Select Start LiveTrack.

9. Scroll to the map to view your connections.

TIP: From the map, you can hold MENU and select Nearby Connections to view distance, direction, and pace or speed information for other connections in the GroupTrack session.

Tips for GroupTrack Sessions
The GroupTrack feature allows you to keep track of other connections in your group using LiveTrack directly on the screen. All members of the group must be your connections in your Garmin Connect account.

• Start your activity outside using GPS.

• Pair your fēnix 5/5S device with your smartphone using Bluetooth technology.

• In the Garmin Connect Mobile app, from the settings menu, select Connections to update the list of connections for your GroupTrack session.

• Make sure all of your connections pair to their smartphones and start a LiveTrack session in the Garmin Connect Mobile app.

• Make sure all your connections are in range (40 km or 25 mi.).

• During a GroupTrack session, scroll to the map to view your connections (Adding a Map to an Activity, page 22).

Garmin Explore™
The Garmin Explore website allows you to plan trips and use cloud storage for your waypoints, routes, and tracks. It offers advanced planning, allowing you to share and sync data with your compatible Garmin device.

You can go to explore.garmin.com.

Wi-Fi® Connected Features
Some fēnix 5/5S models have Wi-Fi connected features. The Garmin Connect Mobile app is not required for you to use Wi-Fi connectivity.
Activity uploads to your Garmin Connect account:
Automatically sends your activity to your Garmin Connect account as soon as you finish recording the activity.

Workouts and training plans: Allows you to browse for and select workouts and training plans on the Garmin Connect site. The next time your device has a Wi-Fi connection, the files are wirelessly sent to your device.

Software updates: Allows your device to download the latest software update when a Wi-Fi connection is available. The next time you turn on or unlock the device, you can follow the on-screen instructions to install the software update.

Connecting to a Wi-Fi Network
You must connect your device to the Garmin Connect Mobile app on your smartphone or to the Garmin Express application on your computer before you can connect to a Wi-Fi network.
1 Hold MENU.
2 Select Settings > Wi-Fi > My Networks > Add Network. The device displays a list of nearby Wi-Fi networks.
3 Select a network.
4 If necessary, enter the password for the network.
The device connects to the network, and the network is added to the list of saved networks. The device reconnects to this network automatically when it is within range.

Connect IQ Features
You can add Connect IQ features to your watch from Garmin and other providers using the Connect IQ website. You can customize your device with watch faces, data fields, widgets, and apps.

Watch Faces: Allow you to customize the appearance of the clock.
Data Fields: Allow you to download new data fields that present sensor, activity, and history data in new ways. You can add Connect IQ data fields to built-in features and pages.
Widgets: Provide information at a glance, including sensor data and notifications.
Apps: Add interactive features to your watch, such as new outdoor and fitness activity types.

Downloading Connect IQ Features Using Your Computer
1 Connect the device to your computer using a USB cable.
2 Go to apps.garmin.com, and sign in.
3 Select a Connect IQ feature, and download it.
4 Follow the on-screen instructions.

Heart Rate Features
The fēnix 5/5S device has a wrist-based heart rate monitor and is also compatible with chest heart rate monitors (sold separately). You can view heart rate data on the heart rate widget. If both wrist-based heart rate and chest heart rate data are available, your device uses the chest heart rate data.

Wrist-based Heart Rate
Wearing the Device
• Wear the device above your wrist bone.
    NOTE: The device should be snug but comfortable. For more accurate heart rate readings on the fēnix device, it should not move while running or exercising.

NOTE: The optical sensor is located on the back of the device.
• See Tips for Erratic Heart Rate Data, page 8 for more information about wrist-based heart rate.
• For more information about accuracy, go to garmin.com/ataccuracy.

Tips for Erratic Heart Rate Data
If the heart rate data is erratic or does not appear, you can try these tips.
• Clean and dry your arm before putting on the device.
• Avoid wearing sunscreen, lotion, and insect repellent under the device.
• Avoid scratching the heart rate sensor on the back of the device.
• Wear the device above your wrist bone. The device should be snug but comfortable.
• Wait until the ❤ icon is solid before starting your activity.
• Warm up for 5 to 10 minutes and get a heart rate reading before starting your activity.

NOTE: In cold environments, warm up indoors.
• Rinse the device with fresh water after each workout.
• While exercising, use a silicone band.

Viewing the Heart Rate Widget
The widget displays your current heart rate in beats per minute (bpm) and a graph of your heart rate for the last 4 hours.
1 From the watch face, select DOWN.
2 Select 🔄 to view your average resting heart rate values for the last 7 days.

Broadcasting Heart Rate Data to Garmin Devices
You can broadcast your heart rate data from your fēnix 5/5S device and view it on paired Garmin devices.

NOTE: Broadcasting heart rate data decreases battery life.
1 From the heart rate widget, hold MENU.
2 Select Options > Broadcast Heart Rate. The fēnix 5/5S device starts broadcasting your heart rate data, and 🖤 appears.

NOTE: You can view only the heart rate widget while broadcasting heart rate data from the heart rate widget.
3 Pair your fēnix 5/5S device with your Garmin ANT+ compatible device.

NOTE: The pairing instructions differ for each Garmin compatible device. See your owner’s manual.
TIP: To stop broadcasting your heart rate data, select any key, and select Yes.
Broadcasting Heart Rate Data During an Activity
You can set up your fēnix 5/5S device to broadcast your heart rate data automatically when you begin an activity. For example, you can broadcast your heart rate data to an Edge® device while cycling, or to a VIRB® action camera during an activity.

**NOTE:** Broadcasting heart rate data decreases battery life.

1. From the heart rate widget, hold MENU.
2. Select Options > Broadcast During Activity.
3. Begin an activity (Starting an Activity, page 2).
   
   The fēnix 5/5S device starts broadcasting your heart rate data in the background.

   **NOTE:** There is no indication that the device is broadcasting your heart rate data during an activity.

4. If necessary, pair your fēnix 5/5S device with your Garmin ANT+ compatible device.

   **NOTE:** The pairing instructions differ for each Garmin compatible device. See your owner’s manual.

   **TIP:** To stop broadcasting your heart rate data, stop the activity (Stopping an Activity, page 2).

Setting an Abnormal Heart Rate Alert
You can set the device to alert you when your heart rate exceeds a certain number of beats per minute (bpm) after a period of inactivity.

1. From the heart rate widget, hold MENU.
2. Select Options > Abnormal HR Alert > Status > On.
3. Select Alert Threshold.
4. Select a heart rate threshold value. Each time you exceed the threshold value, a message appears and the device vibrates.

Turning Off the Wrist-based Heart Rate Monitor
The default value for the Wrist Heart Rate setting is Auto. The device automatically uses the wrist-based heart rate monitor unless you pair an ANT+ heart rate monitor to the device.

1. From the heart rate widget, hold MENU.
2. Select Options > Status > Off.

Putting On the Heart Rate Monitor
You should wear the heart rate monitor directly on your skin, just below your sternum. It should be snug enough to stay in place during your activity.

1. If necessary, attach the strap extender to the heart rate monitor.
2. Wet the electrodes on the back of the heart rate monitor to create a strong connection between your chest and the transmitter.
3. Wear the heart rate monitor with the Garmin logo facing right-side up.
Caring for the Heart Rate Monitor

NOTICE
A buildup of sweat and salt on the strap can decrease the ability of the heart rate monitor to report accurate data.

- Rinse the heart rate monitor after every use.
- Hand wash the heart rate monitor after every seven uses or one pool swim, using a tiny amount of mild detergent, such as dishwashing liquid.
- Do not put the heart rate monitor in a washing machine or dryer.
- When drying the heart rate monitor, hang it up or lay it flat.

Running Dynamics
You can use your compatible fēnix device paired with the HRM-Tri accessory or other running dynamics accessory to provide real-time feedback about your running form. If your fēnix device was packaged with the HRM-Tri accessory, the devices are already paired.

The running dynamics accessory has an accelerometer that measures torso movement in order to calculate six running metrics.

Cadence: Cadence is the number of steps per minute. It displays the total steps (right and left combined).
Vertical oscillation: Vertical oscillation is your bounce while running. It displays the vertical motion of your torso, measured in centimeters.
Ground contact time: Ground contact time is the amount of time in each step that you spend on the ground while running. It is measured in milliseconds.

NOTE: Ground contact time and balance are not available while walking.

Ground contact time balance: Ground contact time balance displays the left/right balance of your ground contact time while running. It displays a percentage. For example, 53.2% with an arrow pointing left or right.
Stride length: Stride length is the length of your stride from one footfall to the next. It is measured in meters.
Vertical ratio: Vertical ratio is the ratio of vertical oscillation to stride length. It displays a percentage. A lower number typically indicates better running form.

Training with Running Dynamics
Before you can view running dynamics, you must put on a running dynamics accessory, such as the HRM-Tri accessory, and pair it with your device (Pairing Your Wireless Sensors, page 27). If your fēnix 5/5S was packaged with the accessory, the devices are already paired, and the fēnix 5/5S is set to display running dynamics data screens.

1 Select an option:
   - If your running dynamics accessory and fēnix 5/5S device are already paired, skip to step 7.
   - If your running dynamics accessory and fēnix 5/5S device are not already paired, complete all the steps in this procedure.
2 Hold MENU.
3 Select Settings > Activities & Apps.
4 Select an activity.
5 Select the activity settings.
6 Select Data Screens > Add New.
7 Select a running dynamics data screen.

NOTE: The running dynamics screens are not available for all activities.
8 Go to a run (Starting an Activity, page 2).
9 Select UP or DOWN to open a running dynamics screen to view your metrics.

Color Gauges and Running Dynamics Data
The running dynamics screens display a color gauge for the primary metric. You can display cadence, vertical oscillation, ground contact time, ground contact time balance, or vertical ratio as the primary metric. The color gauge shows how your running dynamics data compare to those of other runners. The color zones are based on percentiles.
Garmin has researched many runners of all different levels. The data values in the red or orange zones are typical for less experienced or slower runners. The data values in the green, blue, or purple zones are typical for more experienced or faster runners. More experienced runners tend to exhibit shorter ground contact times, lower vertical oscillation, lower vertical ratio, and higher cadence than less experienced runners. However, taller runners typically have slightly slower cadences, longer strides, and slightly higher vertical oscillation. Vertical ratio is your vertical oscillation divided by stride length. It is not correlated with height.

Go to www.garmin.com/runningdynamics for more information on running dynamics. For additional theories and interpretations of running dynamics data, you can search reputable running publications and websites.

<table>

</tbody>
</table>

Ground Contact Time Balance Data
Ground contact time balance measures your running symmetry and appears as a percentage of your total ground contact time. For example, 51.3% with an arrow pointing left indicates the runner is spending more time on the ground when on the left foot. If your data screen displays both numbers, for example 49–52, 48% is the left foot and 52% is the right foot.

<table>
<thead>
<tr>
<th>Color Zone</th>
<th>Red</th>
<th>Orange</th>

<tr>
<td>Ground Contact Time Balance</td>
<td>&gt;52.2% L</td>
<td>50.8–52.2% L</td>
<td>50.7% L–50.7% R</td>
<td>50.8–52.2% R</td>
<td>&gt;52.2% R</td>
</tr>
</tbody>
</table>
While developing and testing running dynamics, the Garmin team found correlations between injuries and greater imbalances with certain runners. For many runners, ground contact time balance tends to deviate further from 50–50 when running up or down hills. Most running coaches agree that a symmetrical running form is good. Elite runners tend to have quick and balanced strides.

You can watch the color gauge or data field during your run or view the summary on your Garmin Connect account after your run. As with the other running dynamics data, ground contact time balance is a quantitative measurement to help you learn about your running form.

### Vertical Oscillation and Vertical Ratio Data

The data ranges for vertical oscillation and vertical ratio are slightly different depending on the sensor and whether it is positioned at the chest (HRM-Tri or HRM-Run™ accessories) or at the waist (Running Dynamics Pod accessory).

<table>

</tbody>
</table>

### Tips for Missing Running Dynamics Data

If running dynamics data does not appear, you can try these tips:

- Make sure you have a running dynamics accessory, such as the HRM-Tri accessory. Accessories with running dynamics have ™ on the front of the module.
- Pair the running dynamics accessory with your fēnix device again, according to the instructions.
- If the running dynamics data display shows only zeros, make sure the accessory is worn right-side up.

**NOTE:** Ground contact time and balance appears only while running. It is not calculated while walking.

### Performance Measurements

These performance measurements are estimates that can help you track and understand your training activities and race performances. The measurements require a few activities using wrist-based heart rate or a compatible chest heart rate monitor. Cycling performance measurements require a heart rate monitor and a power meter.

These estimates are provided and supported by Firstbeat. For more information, go to www.garmin.com/physio.

**NOTE:** The estimates may seem inaccurate at first. The device requires you to complete a few activities to learn about your performance.

- **Training status:** Training status shows you how your training affects your fitness and performance. Your training status is based on changes to your training load and VO2 max. over an extended time period.
- **VO2 max.:** VO2 max. is the maximum volume of oxygen (in milliliters) you can consume per minute per kilogram of body weight at your maximum performance.
- **Recovery time:** The recovery time displays how much time remains before you are fully recovered and ready for the next hard workout.
- **Training load:** Training load is the sum of your excess post-exercise oxygen consumption (EPOC) over the last 7 days.

EPOC is an estimate of how much energy it takes for your body to recover after exercise.

- **Predicted race times:** Your device uses the VO2 max. estimate and published data sources to provide a target race time based on your current state of fitness. This projection also presumes you have completed the proper training for the race.
- **HRV stress test:** The HRV (heart rate variability) stress test requires a Garmin chest heart rate monitor. The device records your heart rate variability while standing still for 3 minutes. It provides your overall stress level. The scale is 1 to 100, and a lower score indicates a lower stress level.
- **Performance condition:** Your performance condition is a real-time assessment after 6 to 20 minutes of activity. It can be added as a data field so you can view your performance condition during the rest of your activity. It compares your real-time condition to your average fitness level.
- **Functional threshold power (FTP):** The device uses your user profile information from the initial setup to estimate your FTP. For a more accurate rating, you can conduct a guided test.
- **Lactate threshold:** Lactate threshold requires a chest heart rate monitor. Lactate threshold is the point where your muscles start to rapidly fatigue. Your device measures your lactate threshold level using heart rate data and pace.

### Turning Off Performance Notifications

Performance notifications are turned on by default. Some performance notifications are alerts that appear upon completion of your activity. Some performance notifications appear during an activity or when you achieve a new performance measurement, such as a new VO2 max. estimate.

1. Hold MENU.
2. Select **Settings > Physiological Metrics > Performance Notifications.**
3. Select an option.

### Detecting Performance Measurements Automatically

The Auto Detection feature is turned on by default. The device can automatically detect your maximum heart rate, and lactate threshold during an activity. When paired with a compatible power meter, the device can automatically detect your functional threshold power (FTP) during an activity.

**NOTE:** The device detects a maximum heart rate only when your heart rate is higher than the value set in your user profile.

1. Hold MENU.
2. Select **Settings > Physiological Metrics > Auto Detection.**
3. Select an option.
Syncing Activities and Performance Measurements
You can sync activities and performance measurements from other Garmin devices to your fēnix 5/5S device using your Garmin Connect account. This allows your device to more accurately reflect your training status and fitness. For example, you can record a ride with an Edge device, and view your activity details and overall training load on your fēnix 5/5S device.

1. Hold MENU.

When you sync your device with your smartphone, recent activities and performance measurements from your other Garmin devices appear on your fēnix 5/5S device.

Training Status
Training status shows you how your training affects your fitness level and performance. Your training status is based on changes to your training load and VO2 max. over an extended time period. You can use your training status to help plan future training and continue improving your fitness level.

Peaking: Peaking means that you are in ideal race condition. Your recently reduced training load is allowing your body to recover and fully compensate for earlier training. You should plan ahead, since this peak state can only be maintained for a short time.

Productive: Your current training load is moving your fitness level and performance in the right direction. You should plan recovery periods into your training to maintain your fitness level.

Maintaining: Your current training load is enough to maintain your fitness level. To see improvement, try adding more variety to your workouts or increasing your training volume.

Recovery: Your lighter training load is allowing your body to recover, which is essential during extended periods of hard training. You can return to a higher training load when you feel ready.

Unproductive: Your training load is at a good level, but your fitness is decreasing. Your body may be struggling to recover, so you should pay attention to your overall health including stress, nutrition, and rest.

Detraining: Detraining occurs when you are training much less than usual for a week or more, and it is affecting your fitness level. You can try increasing your training load to see improvement.

Overreaching: Your training load is very high and counterproductive. Your body needs a rest. You should give yourself time to recover by adding lighter training to your schedule.

No Status: The device needs one or two weeks of training history, including activities with VO2 max. results from running or cycling, to determine your training status.

Tips for Getting Your Training Status
The training status feature depends on updated assessments of your fitness level, including at least two VO2 max. measurements per week. Your VO2 max. estimate is updated after outdoor runs or rides during which your heart rate reached at least 70% of your maximum heart rate for several minutes. The trail run and indoor run activities do not generate a VO2 max. estimate in order to preserve the accuracy of your fitness level trend.

To get the most out of the training status feature, you can try these tips.

• At least two times per week, run or ride outdoors with a power meter, and reach a heart rate higher than 70% of your maximum heart rate for at least 10 minutes.
• After using the device for one week, your training status should be available.

Vo2 Max. Data is Provided by Firstbeat. Vo2 Max. Analysis Is Provided with Permission from the Cooper Institute®. for More Information, See the Appendix (Vo2 Max. Standard Ratings, page 35), and Go to www.CooperInstitute.org.

About Vo2 Max. Estimates
VO2 max. is the maximum volume of oxygen (in milliliters) you can consume per minute per kilogram of body weight at your maximum performance. In simple terms, VO2 max. is an indication of athletic performance and should increase as your level of fitness improves. The fēnix 5/5S device requires wrist-based heart rate or a compatible chest heart rate monitor to display your VO2 max. estimate. The device has separate VO2 max. estimates for running and cycling. You must run either outside with GPS or ride with a compatible power meter at a moderate level of intensity for several minutes to get an accurate VO2 max. estimate.

On the device, your VO2 max. estimate appears as a number, description, and position on the color gauge. On your Garmin Connect account, you can view additional details about your VO2 max. estimate, including your fitness age. Your fitness age gives you an idea of how your fitness compares with a person of the same gender and different age. As you exercise, your fitness age can decrease over time.

| Purple | Superior |
| Blue | Excellent |
| Green | Good |
| Orange | Fair |
| Red | Poor |

Vo2 Max. Data is Provided by Firstbeat. Vo2 Max. Analysis Is Provided with Permission from the Cooper Institute®. for More Information, See the Appendix (Vo2 Max. Standard Ratings, page 35), and Go to www.CooperInstitute.org.

Getting Your Vo2 Max. Estimate for Running
This feature requires wrist-based heart rate or a compatible chest heart rate monitor. If you are using a chest heart rate monitor, you must put it on and pair it with your device (Pairing Your Wireless Sensors, page 27). If your fēnix 5/5S device was packaged with a heart rate monitor, the devices are already paired.

For the most accurate estimate, complete the user profile setup (Setting Up Your User Profile, page 15), and set your maximum heart rate (Setting Your Heart Rate Zones, page 15). The estimate may seem inaccurate at first. The device requires a few runs to learn about your running performance.

1. Run for at least 10 minutes outdoors.
2. After your run, select Save.
3. Select UP or DOWN to view the performance widget.
4. Select ▲ to scroll through the performance measurements.

Getting Your Vo2 Max. Estimate for Cycling
This feature requires a power meter and wrist-based heart rate or a compatible chest heart rate monitor. The power meter must be paired with your fēnix 5/5S device (Pairing Your Wireless Sensors, page 27). If you are using a chest heart rate monitor, you must put it on and pair it with your device. If your fēnix 5/5S device was packaged with a heart rate monitor, the devices are already paired.
For the most accurate estimate, complete the user profile setup (Setting Up Your User Profile, page 15) and set your maximum heart rate (Setting Your Heart Rate Zones, page 15). The estimate may seem inaccurate at first. The device requires a few rides to learn about your cycling performance.

1. Ride at a steady, high intensity for at least 20 minutes.
2. After your ride, select Save.
3. Select UP or DOWN to view the performance widget.
4. Select ▲ to scroll through the performance measurements.

Recovery Time
You can use your Garmin device with wrist-based heart rate or a compatible chest heart rate monitor to display how much time remains before you are fully recovered and ready for the next hard workout.

NOTE: The recovery time recommendation uses your VO2 max. estimate and may seem inaccurate at first. The device requires you to complete a few activities to learn about your performance.

The recovery time appears immediately following an activity. The time counts down until it is optimal for you to attempt another hard workout.

Viewing Your Recovery Time
For the most accurate estimate, complete the user profile setup (Setting Up Your User Profile, page 15), and set your maximum heart rate (Setting Your Heart Rate Zones, page 15).

1. Go for a run.
2. After your run, select Save.

The recovery time appears. The maximum time is 4 days.

NOTE: From the watch face, you can select UP or DOWN to view the performance widget, and select ▲ to scroll through the performance measurements to view your recovery time.

Recovery Heart Rate
If you are training with wrist-based heart rate or a compatible chest heart rate monitor, you can check your recovery heart rate value after each activity. Recovery heart rate is the difference between your exercising heart rate and your heart rate two minutes after the exercise has stopped. For example, after a typical training run, you stop the timer. Your heart rate is 140 bpm. After two minutes of no activity or cool down, your heart rate is 90 bpm. Your recovery heart rate is 50 bpm (140 minus 90). Some studies have linked recovery heart rate to cardiac health. Higher numbers generally indicate healthier hearts.

TIP: For best results, you should stop moving for two minutes while the device calculates your recovery heart rate value. You can save or discard the activity after this value appears.

Training Load
Training load is a measurement of your training volume over the last seven days. It is the sum of your excess post-exercise oxygen consumption (EPOC) measurements for the last seven days. The gauge indicates whether your current load is low, high, or within the optimal range to maintain or improve your fitness level. The optimal range is determined based on your individual fitness level and training history. The range adjusts as your training time and intensity increase or decrease.

Viewing Your Predicted Race Times
For the most accurate estimate, complete the user profile setup (Setting Up Your User Profile, page 15), and set your maximum heart rate (Setting Your Heart Rate Zones, page 15).

Your device uses the VO2 max. estimate (About VO2 Max. Estimates, page 12) and published data sources to provide a target race time based on your current state of fitness. This projection also presumes you have completed the proper training for the race.

NOTE: The projections may seem inaccurate at first. The device requires a few runs to learn about your running performance.

1. Select UP or DOWN to view the performance widget.
2. Select ▲ to scroll through the performance measurements.

Your projected race times appear for 5K, 10K, half marathon, and marathon distances.

About Training Effect
Training Effect measures the impact of an activity on your aerobic and anaerobic fitness. Training Effect accumulates during the activity. As the activity progresses, the Training Effect value increases, telling you how the activity has improved your fitness. Training Effect is determined by your user profile information, heart rate, duration, and intensity of your activity.

Aerobic Training Effect uses your heart rate to measure how the accumulated intensity of an exercise affects your aerobic fitness and indicates if the workout had a maintaining or improving effect on your fitness level. Your EPOC accumulated during exercise is mapped to a range of values that account for your fitness level and training habits. Steady workouts at moderate effort or workouts involving longer intervals (>180 sec) have a positive impact on your aerobic metabolism and result in an improved aerobic Training Effect.

Anaerobic Training Effect uses heart rate and speed (or power) to determine how a workout affects your ability to perform at very high intensity. You receive a value based on the anaerobic contribution to EPOC and the type of activity. Repeated high-intensity intervals of 10 to 120 seconds have a highly beneficial impact on your anaerobic capability and result in an improved anaerobic Training Effect.

It is important to know that your Training Effect numbers (from 0.0 to 5.0) may seem abnormally high during your first few activities. It takes several activities for the device to learn your aerobic and anaerobic fitness.

You can add Training Effect as a data field to one of your training screens to monitor your numbers throughout the activity.

Training effect technology is provided and supported by Firstbeat Technologies Ltd. For more information, go to www.firstbeattechnologies.com.

Heart Rate Variability and Stress Level
Stress level is the result of a three-minute test performed while standing still, where the fenix device analyzes heart rate variability to determine your overall stress. Training, sleep, nutrition, and general life stress all impact how a runner performs. The stress level range is from 1 to 100, where 1 is a very low stress state and 100 is a very high stress state.

Knowing your stress level can help you decide if your body is ready for a tough training run or yoga.
Viewing Your Heart Rate Variability and Stress Level
This feature requires a Garmin chest heart rate monitor. Before you can view your heart rate variability (HRV) stress level, you must put on a heart rate monitor and pair it with your device (Pairing Your Wireless Sensors, page 27). If your fēnix 5/5S device was packaged with a heart rate monitor, the devices are already paired.

TIP: Garmin recommends that you measure your stress level at approximately the same time and under the same conditions every day.

1. If necessary, select 📊 > Add > HRV Stress to add the stress app to the apps list.
2. Select Yes to add the app to your list of favorites.
3. From the watch face, select 📊 > HRV Stress > 📊.
4. Stand still, and rest for 3 minutes.

Performance Condition
As you complete your activity, such as running or cycling, the performance condition feature analyzes your pace, heart rate, and heart rate variability to make a real-time assessment of your ability to perform compared to your average fitness level. It is approximately your real-time percentage deviation from your baseline VO2 max. estimate. Performance condition values range from -20 to +20. After the first 6 to 20 minutes of your activity, the device displays your performance condition score. For example, a score of +5 means that you are rested, fresh, and capable of a good run or ride. You can add performance condition as a data field to one of your training screens to monitor your ability throughout the activity. Performance condition can also be an indicator of fatigue level, especially at the end of a long training run or ride.

NOTE: The device requires a few runs or rides with a heart rate monitor to get an accurate VO2 max. estimate and learn about your running or riding ability (About VO2 Max. Estimates, page 12).

Viewing Your Performance Condition
This feature requires wrist-based heart rate or a compatible chest heart rate monitor.

1. Add Perform. Cond. to a data screen (Customizing the Data Screens, page 22).
2. Go for a run or ride.
   - After 6 to 20 minutes, your performance condition appears.
3. Scroll to the data screen to view your performance condition throughout the run or ride.

Lactate Threshold
Lactate threshold is the exercise intensity at which lactate (lactic acid) starts to accumulate in the bloodstream. In running, it is the estimated level of effort or pace. When a runner exceeds the threshold, fatigue starts to increase at an accelerating rate. For experienced runners, the threshold occurs at approximately 90% of their maximum heart rate and between 10K and half-marathon race pace. For average runners, the lactate threshold often occurs well below 90% of maximum heart rate. Knowing your lactate threshold can help you determine how hard to train or when to push yourself during a race.

If you already know your lactate threshold heart rate value, you can enter it in your user profile settings (Setting Your Heart Rate Zones, page 15).

Performing a Guided Test to Determine Your Lactate Threshold
This feature requires a Garmin chest heart rate monitor. Before you can perform the guided test, you must put on a heart rate monitor and pair it with your device (Pairing Your Wireless Sensors, page 27).

The device uses your user profile information from the initial setup and your VO2 max. estimate to estimate your lactate threshold. The device will automatically detect your lactate threshold during runs at a steady, high intensity with heart rate.

TIP: The device requires a few runs with a chest heart rate monitor to get an accurate maximum heart rate value and VO2 max. estimate. If you are having trouble getting a lactate threshold estimate, try manually lowering your maximum heart rate value.

1. From the watch face, select 📊.
2. Select an outdoor running activity.
3. Hold MENU.
4. Select Training > Lactate Threshold Guided Test.
5. Start the timer, and follow the on-screen instructions.
   - After you begin your run, the device displays each step duration, the target, and current heart rate data. A message appears when the test is complete.
6. After you complete the guided test, stop the timer and save the activity.
   - If this is your first lactate threshold estimate, the device prompts you to update your heart rate zones based on your lactate threshold heart rate. For each additional lactate threshold estimate, the device prompts you to accept or decline the estimate.

Getting Your FTP Estimate
Before you can get your functional threshold power (FTP) estimate, you must pair a chest heart rate monitor and power meter with your device (Pairing Your Wireless Sensors, page 27), and you must get your VO2 max. estimate (Getting Your VO2 Max. Estimate for Cycling, page 12).

The device uses your user profile information from the initial setup and your VO2 max. estimate to estimate your FTP. The device will automatically detect your FTP during rides at a steady, high intensity with heart rate and power.

1. Select UP or DOWN to view the performance widget.
2. Select 📊 to scroll through the performance measurements.
   - Your FTP estimate appears as a value measured in watts per kilogram, your power output in watts, and a position on the color gauge.

Orange
Fair
Green
Good
Blue
Excellent
Purple
Superior
Red
Untrained

For more information, see the appendix (FTP Ratings, page 35)

NOTE: When a performance notification alerts you to a new FTP, you can select Accept to save the new FTP, or Decline to keep your current FTP (Turning Off Performance Notifications, page 11).

Conducting an FTP Test
Before you can conduct a test to determine your functional threshold power (FTP), you must pair a chest heart rate monitor and a power meter with your device (Pairing Your Wireless Sensors, page 27), and you must get your VO2 max. estimate (Getting Your VO2 Max. Estimate for Cycling, page 12).

NOTE: The FTP test is a challenging workout that takes about 30 minutes to complete. Choose a practical and mostly flat route that allows you to ride at a steadily increasing effort, similar to a time trial.

1. From the watch face, select 📊.
2. Select a cycling activity.
3. Hold MENU.
Setting Up Your User Profile
You can update your gender, birth year, height, weight, heart rate zone, and power zone settings. The device uses this information to calculate accurate training data.

1. Hold MENU.
2. Select Settings > User Profile.
3. Select an option.

Fitness Goals
Knowing your heart rate zones can help you measure and improve your fitness by understanding and applying these principles.

- Your heart rate is a good measure of exercise intensity.
- Training in certain heart rate zones can help you improve cardiovascular capacity and strength.

If you know your maximum heart rate, you can use the table (Heart Rate Zone Calculations, page 15) to determine the best heart rate zone for your fitness objectives.

If you do not know your maximum heart rate, use one of the calculators available on the Internet. Some gyms and health centers can provide a test that measures maximum heart rate. The default maximum heart rate is 220 minus your age.

About Heart Rate Zones
Many athletes use heart rate zones to measure and increase their cardiovascular strength and improve their level of fitness. A heart rate zone is a set range of heartbeats per minute. The five commonly accepted heart rate zones are numbered from 1 to 5 according to increasing intensity. Generally, heart rate zones are calculated based on percentages of your maximum heart rate.

Setting Your Heart Rate Zones
The device uses your user profile information from the initial setup to determine your default heart rate zones. You can set separate heart rate zones for sport profiles, such as running, cycling, and swimming. For the most accurate calorie data during your activity, set your maximum heart rate. You can also set each heart rate zone and enter your resting heart rate manually. You can manually adjust your zones on the device or using your Garmin Connect account.

1. Hold MENU.
2. Select Settings > User Profile > Heart Rate.
3. Select Max. HR, and enter your maximum heart rate.
   You can use the Auto Detection feature to automatically record your maximum heart rate during an activity (Detecting Performance Measurements Automatically, page 11).
4. Select LTHR > Enter Manually, and enter your lactate threshold heart rate.

You can perform a guided test to estimate your lactate threshold (Lactate Threshold, page 14). You can use the Auto Detection feature to automatically record your lactate threshold during an activity (Detecting Performance Measurements Automatically, page 11).

5. Select Resting HR, and enter your resting heart rate.
   You can use the average resting heart rate measured by your device, or you can set a custom resting heart rate.
6. Select Zones > Based On.
7. Select an option:
   - Select BPM to view and edit the zones in beats per minute.
   - Select %Max. HR to view and edit the zones as a percentage of your maximum heart rate.
   - Select %HRR to view and edit the zones as a percentage of your heart rate reserve (maximum heart rate minus resting heart rate).
   - Select %LTHR to view and edit the zones as a percentage of your lactate threshold heart rate.
8. Select a zone, and enter a value for each zone.
9. Select Add Sport Heart Rate, and select a sport profile to add separate heart rate zones (optional).
10. Repeat steps 3 through 8 to add sport heart rate zones (optional).

Letting the Device Set Your Heart Rate Zones
The default settings allow the device to detect your maximum heart rate and set your heart rate zones as a percentage of your maximum heart rate.

- Verify that your user profile settings are accurate (Setting Up Your User Profile, page 15).
- Run often with the wrist or chest heart rate monitor.
- Try a few heart rate training plans, available from your Garmin Connect account.
- View your heart rate trends and time in zones using your Garmin Connect account.

Setting Your Power Zones
The values for the zones are default values based on gender, weight, and average ability, and may not match your personal abilities. If you know your functional threshold power (FTP) value, you can enter it and allow the software to calculate your power zones automatically. You can manually adjust your zones on the device or using your Garmin Connect account.
1 Hold MENU.
2 Select Settings > User Profile > Power Zones > Based On.
3 Select an option:
   • Select Watts to view and edit the zones in watts.
   • Select % FTP to view and edit the zones as a percentage of your functional threshold power.
4 Select FTP, and enter your FTP value.
5 Select a zone, and enter a value for each zone.
6 If necessary, select Minimum, and enter a minimum power value.

**Activity Tracking**
The activity tracking feature records your daily step count, distance traveled, intensity minutes, floors climbed, calories burned, and sleep statistics for each recorded day. Your calories burned includes your base metabolism plus activity calories.
The number of steps taken during the day appears on the steps widget. The step count is updated periodically.
For more information about activity tracking and fitness metric accuracy, go to garmin.com/ataccuracy.

**Auto Goal**
Your device creates a daily step goal automatically, based on your previous activity levels. As you move during the day, the device shows your progress toward your daily goal.

If you choose not to use the auto goal feature, you can set a personalized step goal on your Garmin Connect account.

**Using the Move Alert**
Sitting for prolonged periods of time can trigger undesirable metabolic state changes. The move alert reminds you to keep moving. After one hour of inactivity, Move! and the red bar appear. Additional segments appear after every 15 minutes of inactivity. The device also beeps or vibrates if audible tones are turned on (System Settings, page 27).

Go for a short walk (at least a couple of minutes) to reset the move alert.

**Sleep Tracking**
While you are sleeping, the device automatically detects your sleep and monitors your movement during your normal sleep hours. You can set your normal sleep hours in the user settings on your Garmin Connect account. Sleep statistics include total hours of sleep, sleep levels, and sleep movement. You can view your sleep statistics on your Garmin Connect account.

**Using Automated Sleep Tracking**
1 Wear your device while sleeping.
2 Upload your sleep tracking data to the Garmin Connect site (Manually Syncing Data with Garmin Connect Mobile, page 7).
   You can view your sleep statistics on your Garmin Connect account.

**Using Do Not Disturb Mode**
You can use do not disturb mode to turn off the backlight, tone alerts, and vibration alerts. For example, you can use this mode while sleeping or watching a movie.

**NOTE:** You can set your normal sleep hours in the user settings on your Garmin Connect account. You can enable the Sleep Time option in the system settings to automatically enter do not disturb mode during your normal sleep hours (System Settings, page 27).

1 Hold LIGHT.
2 Select ☹.

**Intensity Minutes**
To improve your health, organizations such as the U.S. Centers for Disease Control and Prevention, the American Heart Association, and the World Health Organization, recommend at least 150 minutes per week of moderate intensity activity, such as brisk walking, or 75 minutes per week of vigorous intensity activity, such as running.
The device monitors your activity intensity and tracks your time spent participating in moderate to vigorous intensity activities (heart rate data is required to quantify vigorous intensity). You can work toward achieving your weekly intensity minutes goal by participating in at least 10 consecutive minutes of moderate to vigorous intensity activities. The device adds the amount of moderate activity minutes with the amount of vigorous activity minutes. Your total vigorous intensity minutes are doubled when added.

**Earning Intensity Minutes**
Your fēnix 5/5S device calculates intensity minutes by comparing your heart rate data to your average resting heart rate. If heart rate is turned off, the device calculates moderate intensity minutes by analyzing your steps per minute.
   • Start a timed activity for the most accurate calculation of intensity minutes.
   • Exercise for at least 10 consecutive minutes at a moderate or vigorous intensity level.
   • Wear your device all day and night for the most accurate resting heart rate.

**Garmin Move IQ™**
When your movements match familiar exercise patterns, the Move IQ feature automatically detects the event and displays it in your timeline. The Move IQ events show activity type and duration, but they do not appear in your activities list or newsfeed.
The Move IQ feature can automatically start a timed activity for walking and running using time thresholds you set in the Garmin Connect Mobile app. These activities are added to your activities list.

**Activity Tracking Settings**
Hold MENU, and select Settings > Activity Tracking.

**Status:** Turns off the activity tracking features.

**Move Alert:** Displays a message and the move bar on the digital watch face and steps screen. The device also beeps or vibrates if audible tones are turned on (System Settings, page 27).

**Goal Alerts:** Allows you to turn on and off goal alerts, or turn them off only during activities. Goal alerts appear for your daily steps goal, daily floors climbed goal, and weekly intensity minutes goal.

**Move IQ:** Allows you to turn on and off Move IQ events.

**Turning Off Activity Tracking**
When you turn off activity tracking, your steps, floors climbed, intensity minutes, sleep tracking, and Move IQ events are not recorded.
1. Hold MENU.
2. Select Settings > Activity Tracking > Status > Off.

Workouts

You can create custom workouts that include goals for each workout step and for varied distances, times, and calories. You can create workouts using Garmin Connect or select a training plan that has built-in workouts from Garmin Connect, and transfer them to your device.

You can schedule workouts using Garmin Connect. You can plan workouts in advance and store them on your device.

Following a Workout From the Web

Before you can download a workout from Garmin Connect, you must have a Garmin Connect account (Garmin Connect, page 6).
1. Connect the device to your computer.
3. Create and save a new workout.
4. Select Send to Device, and follow the on-screen instructions.
5. Disconnect the device.

Starting a Workout

Before you can start a workout, you must download a workout from your Garmin Connect account.
1. From the watch face, select ⌘.
2. Select an activity.
3. Hold MENU.
4. Select Training > My Workouts.
5. Select a workout.
   NOTE: Only workouts that are compatible with the selected activity appear in the list.
7. Select ⌘ to start the timer.

After you begin a workout, the device displays each step of the workout, step notes (optional), the target (optional), and the current workout data.

About the Training Calendar

The training calendar on your device is an extension of the training calendar or schedule you set up in Garmin Connect. After you have added a few workouts to the Garmin Connect calendar, you can send them to your device. All scheduled workouts sent to the device appear in the training calendar list by date. When you select a day in the training calendar, you can view or do the workout. The scheduled workout stays on your device whether you complete it or skip it. When you send scheduled workouts from Garmin Connect, they overwrite the existing training calendar.

Using Garmin Connect Training Plans

Before you can download and use a training plan from Garmin Connect, you must have a Garmin Connect account (Garmin Connect, page 6), and you must pair the fenix device with a compatible smartphone.
1. From the Garmin Connect Mobile app, select Training > Training Plans > Find a Plan.
2. Select and schedule a training plan.
3. Select ⌘, and follow the on-screen instructions.
4. Review the training plan in your calendar.

Adaptive Training Plans

Your Garmin Connect account has an adaptive training plan and Garmin coach to fit your training goals. For example, you can answer a few questions and find a plan to help you complete a 5 km race. The plan adjusts to your current level of fitness, coaching and schedule preferences, and race date. When you start a plan, the Garmin Coach widget is added to the widget loop on your fenix device.

Interval Workouts

You can create interval workouts based on distance or time. The device saves your custom interval workout until you create another interval workout. You can use open intervals for track workouts and when you are running a known distance.

Creating an Interval Workout
1. From the watch face, select ⌘.
2. Select an activity.
3. Hold MENU.
4. Select Training > Intervals > Edit > Interval > Type.
5. Select Distance, Time, or Open.
   TIP: You can create an open-ended interval by selecting the Open option.
6. Select Duration, enter a distance or time interval value for the workout, and select ✓.
7. Select BACK.
8. Select Rest > Type.
9. Select Distance, Time, or Open.
10. If necessary, enter a distance or time value for the rest interval, and select ✓.
11. Select BACK.
12. Select one or more options:
    • To set the number of repetitions, select Repeat.
    • To add an open-ended warm up to your workout, select Warm Up > On.
    • To add an open-ended cool down to your workout, select Cool Down > On.

Starting an Interval Workout
1. From the watch face, select ⌘.
2. Select an activity.
3. Hold MENU.
4. Select Training > Intervals > Do Workout.
5. Select ⌘ to start the timer.
6. When your interval workout has a warm up, select LAP to begin the first interval.
7. Follow the on-screen instructions.

After you complete all of the intervals, a message appears.

Stopping an Interval Workout

• At any time, select LAP to stop the current interval or rest period and transition to the next interval or rest period.
• After all intervals and rest periods are complete, select LAP to end the interval workout and transition to a timer that can be used for cool down.
• At any time, select ⌘ to stop the timer. You can resume the timer or end the interval workout.

Segments

You can send running or cycling segments from your Garmin Connect account to your device. After a segment is saved to your device, you can race a segment, trying to match or exceed your personal record or other participants who have raced the segment.

NOTE: When you download a course from your Garmin Connect account, you can download all of the available segments in the course.
**Strava™ Segments**
You can download Strava segments to your fēnix 5/5S device. Follow Strava segments to compare your performance with your past rides, friends, and pros who have ridden the same segment.

To sign up for a Strava membership, go to the segments widget in your Garmin Connect account. For more information, go to www.strava.com.

The information in this manual applies to both Garmin Connect segments and Strava segments.

**Viewing Segment Details**
1. Select ▲.
2. Select an activity.
3. Hold MENU.
4. Select Training > Segments.
5. Select a segment.
6. Select an option:
   - Select Race Time to view the time and average speed or pace for the segment leader.
   - Select Map to view the segment on the map.
   - Select Elevation Plot to view an elevation plot of the segment.

**Racing a Segment**
Segments are virtual race courses. You can race a segment, and compare your performance to past activities, others' performance, connections in your Garmin Connect account, or other members of the running or cycling communities. You can upload your activity data to your Garmin Connect account to view your segment position.

**NOTE:** If your Garmin Connect account and Strava account are linked, your activity is automatically sent to your Strava account so you can review the segment position.

1. Select ▲.
2. Select an activity.
3. Go for a run or ride.
   - When you approach a segment, a message appears, and you can race the segment.
4. Start racing the segment.
   - A message appears when the segment is complete.

**Using Virtual Partner™**
Your Virtual Partner is a training tool designed to help you meet your goals. You can set a pace for the Virtual Partner and race against it.

**NOTE:** This feature is not available for all activities.

1. Hold MENU.
2. Select Settings > Activities & Apps.
3. Select an activity.
4. Select the activity settings.
5. Select Data Screens > Add New > Virtual Partner.
6. Enter a pace or speed value.
7. Start your activity (Starting an Activity, page 2).
8. Select UP or DOWN to scroll to the Virtual Partner screen and see who is leading.

**Setting a Training Target**
The training target feature works with the Virtual Partner feature so you can train toward a set distance, distance and time, distance and pace, or distance and speed goal. During your training activity, the device gives you real-time feedback about how close you are to achieving your training target.

1. From the watch face, select ▲.
2. Select an activity.
3. Hold MENU.
4. Select Training > Set a Target.
5. Select an option:
   - Select Distance Only to select a preset distance or enter a custom distance.
   - Select Distance and Time to select a distance and time target.
   - Select Distance and Pace or Distance and Speed to select a distance and pace or speed target.
   - The training target screen appears and displays your estimated finish time. The estimated finish time is based on your current performance and the time remaining.
6. Select ▲ to start the timer.

**Cancelling a Training Target**
1. During an activity, hold MENU.
2. Select Cancel Target > Yes.

**Racing a Previous Activity**
You can race a previously recorded or downloaded activity. This feature works with the Virtual Partner feature so you can see how far ahead or behind you are during the activity.

**NOTE:** This feature is not available for all activities.

1. From the watch face, select ▲.
2. Select an activity.
3. Hold MENU.
4. Select Training > Race an Activity.
5. Select an option:
   - Select From History to select a previously recorded activity from your device.
   - Select Downloaded to select an activity you downloaded from your Garmin Connect account.
6. Select the activity.
   - The Virtual Partner screen appears indicating your estimated finish time.
7. Select ▲ to start the timer.
8. After you complete your activity, select ▲ > Save.

**Personal Records**
When you complete an activity, the device displays any new personal records you achieved during that activity. Personal records include your fastest time over several typical race distances and longest run or ride.

**NOTE:** For cycling, personal records also include most ascent and best power (power meter required).

**Viewing Your Personal Records**
1. Hold MENU.
2. Select History > Records.
3. Select a sport.
4. Select a record.
5. Select View Record.

**Restoring a Personal Record**
You can set each personal record back to the one previously recorded.

1. Hold MENU.
2. Select History > Records.
3. Select a sport.
4. Select a record to restore.
5 Select Previous > Yes.
   NOTE: This does not delete any saved activities.

Clearing a Personal Record
1 Hold MENU.
2 Select History > Records.
3 Select a sport.
4 Select a record to delete.
5 Select Clear Record > Yes.
   NOTE: This does not delete any saved activities.

Clearing All Personal Records
1 Hold MENU.
2 Select History > Records.
3 Select a sport.
4 Select Clear All Records > Yes.
   The records are deleted for that sport only.

Clock

Setting an Alarm
You can set up to ten separate alarms. You can set each alarm to sound once or to repeat regularly.
1 From the watch face, hold MENU.
2 Select Clock > Alarm Clock > Add Alarm.
3 Select Time, and enter the alarm time.
4 Select Repeat, and select when the alarm should repeat (optional).
5 Select Sounds, and select a type of notification (optional).
6 Select Backlight > On to turn on the backlight with the alarm.
7 Select Label, and select a description for the alarm (optional).

Deleting an Alarm
1 From the watch face, hold MENU.
2 Select Clock > Alarm Clock.
3 Select an alarm.
4 Select Delete.

Starting the Countdown Timer
1 From the watch face, hold MENU.
2 Select Clock > Timer.
3 Enter the time.
4 If necessary, select Restart > On to automatically restart the timer after it expires.
5 If necessary, select Sounds, and select a type of notification.
6 Select Start Timer.

Using the Stopwatch
1 From the watch face, hold MENU.
2 Select Clock > Stopwatch.
3 Select ▲ to start the timer.
4 Select LAP to restart the lap timer①.

The total stopwatch time ② continues running.
5 Select ▲ to stop both timers.
6 Select an option.

Adding Alternate Time Zones
You can display the current time of day in additional time zones on the Alt. Time Zones widget. You can add up to four alternate time zones.
NOTE: You may need to add the Alt. Time Zones widget to the widget loop.
1 From the watch face, hold MENU.
2 Select Clock > Alt. Time Zones > Add Zone.
3 Select a time zone.
4 If necessary, select Yes to rename the zone.

Setting Clock Alerts
1 From the watch face, hold MENU.
2 Select Clock > Alerts.
3 Select an option:
   • To set an alert to sound a specific number of minutes or hours before the actual sunset occurs, select Til Sunset > Status > On, select Time, and enter the time.
   • To set an alert to sound a specific number of minutes or hours before the actual sunrise occurs, select Til Sunrise > Status > On, select Time, and enter the time.
   • To set an alert to sound every hour, select Hourly > On.

Syncing the Time with GPS
Each time you turn on the device and acquire satellites, the device automatically detects your time zones and the current time of day. You can also manually sync the time with GPS when you change time zones, and to update for daylight saving time.
1 From the watch face, hold MENU.
2 Select Clock > Sync With GPS.
3 Wait while the device locates satellites (Acquiring Satellite Signals, page 31).

Navigation

Saving Your Location
You can save your current location to navigate back to it later.
1 Hold LIGHT.
2 Select ☄.
3 Follow the on-screen instructions.

Editing Your Saved Locations
You can delete a saved location or edit its name, elevation, and position information.
1 From the watch face, select ▲ > Navigate > Saved Locations.
2 Select a saved location.
3 Select an option to edit the location.
Navigating with Sight 'N Go
You can create a new location by projecting the distance and bearing from your current location to a new location.
1 If necessary, select ▲ > Add > Project Wpt. to add the project waypoint app to the apps list.
2 Select Yes to add the app to your list of favorites.
3 From the watch face, select ▲ > Project Wpt.
4 Select UP or DOWN to set the heading.
5 Select ▲.
6 Select DOWN to select a unit of measure.
7 Select UP to enter the distance.
8 Select ▲ to save.
The projected waypoint is saved with a default name.

Navigating to a Destination
You can use your device to navigate to a destination or follow a course.
1 From the watch face, select ▲ > Navigate.
2 Select a category.
3 Respond to the on-screen prompts to choose a destination.
4 Select Go To.
   Navigation information appears.
5 Select ▲ to begin navigation.

Creating and Following a Course on Your Device
1 From the watch face, select ▲ > Navigate > Courses > Create New.
2 Enter a name for the course, and select ✔.
3 Select Add Location.
4 Select an option.
5 If necessary, repeat steps 3 and 4.
6 Select Done > Do Course.
   Navigation information appears.
7 Select ▲ to begin navigation.

Marking and Starting Navigation to a Man Overboard Location
You can save a man overboard (MOB) location, and automatically start navigation back to it.
TIP: You can customize the hold function of the keys to access the MOB function (Customizing the Hot Keys, page 27).
   From the watch face, select ▲ > Navigate > Last MOB.
   Navigation information appears.

Navigating with Sight 'N Go
You can point the device at an object in the distance, such as a water tower, lock in the direction, and then navigate to the object.
1 From the watch face, select ▲ > Navigate > Sight 'N Go.
2 Point the top of the watch at an object, and select ▲.
   Navigation information appears.
3 Select ▲ to begin navigation.

Navigating to Your Starting Point During an Activity
You can navigate back to the starting point of your current activity in a straight line or along the path you traveled. This feature is available only for activities that use GPS.
1 During an activity, select ▲ > Back to Start.
2 Select an option:
   • To navigate back to the starting point of your activity along the path you traveled, select TracBack.
   • To navigate back to the starting point of your activity in a straight line, select Straight Line.

Your current location ①, the track to follow ②, and your destination ③ appear on the map.

Navigating to the Starting Point of Your Last Saved Activity
You can navigate back to the starting point of your last saved activity in a straight line or along the path you traveled. This feature is available only for activities that use GPS.
1 Select ▲ > Navigate > Back to Start > Straight Line.
   A line appears on the map from your current location to the starting point of the last saved activity.
NOTE: You can start the timer to prevent the device from timing out to watch mode.
2 Select DOWN to view the compass (optional).
   The arrow points toward your starting point.

Stopping Navigation
1 During an activity, hold MENU.
2 Select Stop Navigation.

Map
▲ represents your location on the map. Location names and symbols appear on the map. When you are navigating to a destination, your route is marked with a line on the map.
• Map navigation (Panning and Zooming the Map, page 20)
• Map settings (Map Settings, page 26)

Panning and Zooming the Map
1 While navigating, select UP or DOWN to view the map.
2 Hold MENU.
3 Select Pan/Zoom.
4 Select an option:
   • To toggle between panning up and down, panning left and right, or zooming, select ▲.
   • To pan or zoom the map, select UP and DOWN.
   • To quit, select BACK.

Compass
The device has a 3-axis compass with automatic calibration. The compass features and appearance change depending on your activity, whether GPS is enabled, and whether you are navigating to a destination. You can change the compass settings manually (Compass Settings, page 25). To open the compass settings quickly, you can select ▲ from the compass widget.
Altimeter and Barometer
The device contains an internal altimeter and barometer. The device collects elevation and pressure data continuously, even in low-power mode. The altimeter displays your approximate elevation based on pressure changes. The barometer displays environmental pressure data based on the fixed elevation where the altimeter was most recently calibrated (Altimeter Settings, page 26). To open the altimeter or barometer settings quickly, select ▲ from the altimeter or barometer widgets.

History
History includes time, distance, calories, average pace or speed, lap data, and optional sensor information.

NOTE: When the device memory is full, your oldest data is overwritten.

Using History
History contains previous activities you have saved on your device.
1 Hold MENU.
2 Select History > Activities.
3 Select an activity.
4 Select an option:
   • To view additional information about the activity, select Details.
   • To select a lap and view additional information about each lap, select Laps.
   • To select an interval and view additional information about each interval, select Intervals.
   • To select an exercise set and view additional information about each set, select Sets.
   • To view the activity on a map, select Map.
   • To view the impact of the activity on your aerobic and anaerobic fitness, select Training Effect (About Training Effect, page 13).
   • To view your time in each heart rate zone, select Time in Zone (Viewing Your Time in Each Heart Rate Zone, page 21).
   • To view an elevation plot of the activity, select Elevation Plot.
   • To delete the selected activity, select Delete.

Multisport History
Your device stores the overall multisport summary of the activity, including overall distance, time, calories, and optional accessory data. Your device also separates the activity data for each sport segment and transition so you can compare similar training activities and track how quickly you move through the transitions. Transition history includes distance, time, average speed, and calories.

Viewing Your Time in Each Heart Rate Zone
Before you can view heart rate zone data, you must complete an activity with heart rate and save the activity. Viewing your time in each heart rate zone can help you adjust your training intensity.

1 Hold MENU.
2 Select History > Activities.
3 Select an activity.
4 Select Time in Zone.

Viewing Data Totals
You can view the accumulated distance and time data saved to your device.

1 Hold MENU.
2 Select History > Totals.
3 If necessary, select an activity.
4 Select an option to view weekly or monthly totals.

Using the Odometer
The odometer automatically records the total distance traveled, elevation gained, and time in activities.

1 Hold MENU.
2 Select History > Totals > Odometer.
3 Select UP or DOWN to view odometer totals.

Deleting History
1 Hold MENU.
2 Select History > Options.
3 Select an option:
   • Select Delete All Activities to delete all activities from the history.
   • Select Reset Totals to reset all distance and time totals.
   NOTE: This does not delete any saved activities.
4 Confirm your selection.

Customizing Your Device

Activities and App Settings
These settings allow you to customize each preloaded activity app based on your needs. For example, you can customize data pages and enable alerts and training features. Not all settings are available for all activity types.

Hold MENU, select Settings > Activities & Apps, select an activity, and select the activity settings.

3D Distance: Calculates your distance traveled using your elevation change and your horizontal movement over ground.

3D Speed: Calculates your speed using your elevation change and your horizontal movement over ground (3D Speed and Distance, page 23).

Accent Color: Sets the accent color of each activity to help identify which activity is active.

Alerts: Sets the training or navigation alerts for the activity.

Auto Climb: Enables the device to detect elevation changes automatically using the built-in altimeter.

Auto Lap: Sets the options for the Auto Lap® feature (Auto Lap, page 22).

Auto Pause: Sets the device to stop recording data when you stop moving or when you drop below a specified speed (Enabling Auto Pause®, page 23).

Auto Run: Enables the device to detect ski runs automatically using the built-in accelerometer.

Auto Scroll: Enables you to move through all of the activity data screens automatically while the timer is running (Using Auto Scroll, page 23).

Auto Set: Enables the device to start and stop exercise sets automatically during a strength training activity.

Background Color: Sets the background color of each activity to black or white.

Countdown Start: Enables a countdown timer for pool swimming intervals.

Data Screens: Enables you to customize data screens and add new data screens for the activity (Customizing the Data Screens, page 22).
GPS: Sets the mode for the GPS antenna. Using the GPS + GLONASS option provides increased performance in challenging environments and faster position acquisition. Using the GPS + GLONASS option can reduce battery life more than using the GPS option only. Using the UltraTrac option records track points and sensor data less frequently (UltraTrac, page 23).

Lap Key: Enables you to record a lap or a rest during the activity.

Lock Keys: Locks the keys during multisport activities to prevent accidental key presses.

Metronome: Plays tones at a steady rhythm to help you improve your performance by training at a faster, slower, or more consistent cadence (Using the Metronome, page 3).

Pool Size: Sets the pool length for pool swimming.

Power Save Timeout: Sets the power-save timeout options for the activity (Power Save Timeout Settings, page 23).

Rename: Sets the activity name.

Repeat: Enables the Repeat option for multisport activities. For example, you can use this option for activities that include multiple transitions, such as a swimrun.

Restore Defaults: Allows you to reset the activity settings.

Scoring: Enables or disables scorekeeping automatically when you start a round of golf. The Always Ask option prompts you when you begin a round.

Segment Alerts: Enables prompts that alert you to approaching segments.

Stat Tracking: Enables statistics tracking while playing golf.

Stroke Detect.: Enables stroke detection for pool swimming.

Transitions: Enables transitions for multisport activities.

Customizing the Data Screens
You can show, hide, and change the layout and content of data screens for each activity.

1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select the activity to customize.
4 Select the activity settings.
5 Select Data Screens.
6 Select a data screen to customize.

7 Select an option:
   • Select Layout to adjust the number of data fields on the data screen.
   • Select a field to change the data that appears in the field.
   • Select Reorder to change the location of the data screen in the loop.
   • Select Remove to remove the data screen from the loop.
8 If necessary, select Add New to add a data screen to the loop.

You can add a custom data screen, or select one of the predefined data screens.

Adding a Map to an Activity
You can add the map to the data screens loop for an activity.

1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select the activity to customize.
4 Select the activity settings.
5 Select Data Screens > Add New > Map.

Alerts
You can set alerts for each activity, which can help you to train toward specific goals, to increase your awareness of your environment, and to navigate to your destination. Some alerts are available only for specific activities. There are three types of alerts: event alerts, range alerts, and recurring alerts.

Event alert: An event alert notifies you once. The event is a specific value. For example, you can set the device to alert you when you reach a specified elevation.

Range alert: A range alert notifies you each time the device is above or below a specified range of values. For example, you can set the device to alert you when your heart rate is below 60 beats per minute (bpm) and over 210 bpm.

Recurring alert: A recurring alert notifies you each time the device records a specified value or interval. For example, you can set the device to alert you every 30 minutes.

<table>

</tbody>
</table>

Setting an Alert
1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.

   NOTE: This feature is not available for all activities.
4 Select the activity settings.
5 Select Alerts.
6 Select an option:
   • Select Add New to add a new alert for the activity.
   • Select the alert name to edit an existing alert.
7 If necessary, select the type of alert.
8 Select a zone, enter the minimum and maximum values, or enter a custom value for the alert.
9 If necessary, turn on the alert.

For event and recurring alerts, a message appears each time you exceed or drop below the specified range (minimum and maximum values).

Auto Lap

Marking Laps by Distance
You can use Auto Lap to mark a lap at a specific distance automatically. This feature is helpful for comparing your
performance over different parts of an activity (for example, every 1 mile or 5 kilometers).

1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.
4 Select the activity settings.
5 Select Auto Lap.
6 Select an option:
   • Select Auto Lap to turn Auto Lap on or off.
   • Select Auto Distance to adjust the distance between laps.

Each time you complete a lap, a message appears that displays the time for that lap. The device also beeps or vibrates if audible tones are turned on (System Settings, page 27). If necessary, you can customize the data pages to display additional lap data (Customizing the Data Screens, page 22).

Customizing the Lap Alert Message
You can customize one or two data fields that appear in the lap alert message.

1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.
4 Select the activity settings.
5 Select Auto Lap > Lap Alert.
6 Select a data field to change it.
7 Select Preview (optional).

Enabling Auto Pause
You can use the Auto Pause feature to pause the timer automatically when you stop moving. This feature is helpful if your activity includes stop lights or other places where you must stop.

NOTE: History is not recorded while the timer is stopped or paused.
1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.
4 Select the activity settings.
5 Select Auto Lap > Lap Alert.
6 Select a data field to change it.
7 Select Preview (optional).

Enabling Auto Climb
You can use the auto climb feature to detect elevation changes automatically. You can use it during activities such as climbing, hiking, running, or biking.

1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.
4 Select the activity settings.
5 Select Auto Climb > Status > On.
6 Select an option:

   • Select Run Screen to identify which data screen appears while running.
   • Select Climb Screen to identify which data screen appears while climbing.
   • Select Invert Colors to reverse the display colors when changing modes.
   • Select Vertical Speed to set the rate of ascent over time.
   • Select Mode Switch to set how quickly the device changes modes.

3D Speed and Distance
You can set 3D speed and distance to calculate your speed or distance using both your elevation change and your horizontal movement over ground. You can use it during activities such as skiing, climbing, navigating, hiking, running, or biking.

Turning On and Off the Lap Key
You can turn on the Lap Key setting to record a lap or a rest during an activity using LAP. You can turn off the Lap Key setting to avoid recording laps due to accidental key presses during an activity.

1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.
4 Select the activity settings.
5 Select Lap Key.
   The lap key status changes to On or Off based on the current setting.

Using Auto Scroll
You can use the auto scroll feature to cycle through all of the activity data screens automatically while the timer is running.

1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.
4 Select the activity settings.
5 Select a display speed.

UltraTrac
The UltraTrac feature is a GPS setting that records track points and sensor data less frequently. Enabling the UltraTrac feature increases battery life but decreases the quality of recorded activities. You should use the UltraTrac feature for activities that demand longer battery life and for which frequent sensor data updates are less important.

Power Save Timeout Settings
The timeout settings affect how long your device stays in training mode, for example, when you are waiting for a race to start. Hold MENU, select Settings > Activities & Apps, select an activity, and select the activity settings. Select Power Save Timeout to adjust the timeout settings for the activity.

Normal: Sets the device to enter low-power watch mode after 5 minutes of inactivity.

Extended: Sets the device to enter low-power watch mode after 25 minutes of inactivity. The extended mode can result in shorter battery life between charges.

Changing the Order of an Activity in the Apps List

1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.
4 Select Reorder.
5 Select UP or DOWN to adjust the position of the activity in the apps list.

**Widgets**
Your device comes preloaded with widgets that provide at-a-glance information. Some widgets require a Bluetooth connection to a compatible smartphone.

Some widgets are not visible by default. You can add them to the widget loop manually.

**ABC**: Displays combined altimeter, barometer, and compass information.

**Alternate time zones**: Displays the current time of day in additional time zones.

**Calendar**: Displays upcoming meetings from your smartphone calendar.

**Calories**: Displays your calorie information for the current day.

**Dog tracking**: Displays your dog's location information when you have a compatible dog tracking device paired with your fēnix device.

**Floors climbed**: Tracks your floors climbed and progress toward your goal.

**Golf**: Displays golf information for your last round.

**Heart rate**: Displays your current heart rate in beats per minute (bpm) and a graph of your heart rate.

**Intensity minutes**: Tracks your time spent participating in moderate to vigorous activities, your weekly intensity minutes goal, and progress toward your goal.

**inReach™ controls**: Allows you to send messages on your paired inReach device.

**Last activity**: Displays a brief summary of your last recorded activity, such as your last run, last ride, or last swim.

**Last sport**: Displays a brief summary of your last recorded sport.

**Music controls**: Provides music player controls for your smartphone.

**My day**: Displays a dynamic summary of your activity today. The metrics include timed activities, intensity minutes, floors climbed, steps, calories burned, and more.

**Notifications**: Alerts you to incoming calls, texts, social network updates, and more, based on your smartphone notification settings.

**Performance**: Displays your current training status, training load, VO2 max. estimates, recovery time, FTP estimate, lactate threshold, and predicted race times.

**Sensor information**: Displays information from an internal sensor or a connected ANT+ sensor.

**Steps**: Tracks your daily step count, step goal, and data for previous days.

**Stress**: Displays your current stress level and a graph of your stress level. You can do a breathing activity to help you relax.

**Sunrise and sunset**: Displays sunrise, sunset, and civil twilight times.

**VIRB controls**: Provides camera controls when you have a VIRB device paired with your fēnix device.

**Weather**: Displays the current temperature and weather forecast.

**Xero™ bow sight**: Displays laser location information when you have a Xero bow sight paired with your fēnix device.

**Customizing the Widget Loop**
You can change the order of widgets in the widget loop, remove widgets, and add new widgets.

1 Hold MENU.

2 Select **Settings > Widgets**.
3 Select a widget.
4 Select an option:
   - Select **Reorder** to change the location of the widget in the widget loop.
   - Select **Remove** to remove the widget from the widget loop.
5 Select **Add Widgets**.
6 Select a widget.
   - The widget is added to the widget loop.

**inReach Remote**
The inReach remote function allows you to control your inReach device using your fēnix device. Go to buy.garmin.com to purchase an inReach device.

**Using the inReach Remote**
Before you can use the inReach remote function, you must set the inReach widget to be shown in the widget loop (**Customizing the Widget Loop**, page 24).

1 Turn on the inReach device.
2 On your fēnix device, select **UP** or **DOWN** from the watch face to view the inReach widget.
3 Select ▲ to search for your inReach device.
4 Select ▼ to pair your inReach device.
5 Select ▲, and select an option:
   - To send an SOS message, select **Initiate SOS**.
     **NOTE**: You should only use the SOS function in a real emergency situation.
   - To send a text message, select **Messages > New Message**, select the message contacts, and enter the message text or select a quick text option.
   - To send a preset message, select **Send Preset**, and select a message from the list.
   - To view the timer and distance traveled during an activity, select **Tracking**.

**VIRB Remote**
The VIRB remote function allows you to control your VIRB action camera using your device. Go to www.garmin.com/VIRB to purchase a VIRB action camera.

**Controlling a VIRB Action Camera**
Before you can use the VIRB remote function, you must enable the remote setting on your VIRB camera. See the **VIRB Series Owner's Manual** for more information. You must also set the VIRB widget to be shown in the widget loop (**Customizing the Widget Loop**, page 24).

1 Turn on your VIRB camera.
2 On your fēnix device, select **UP** or **DOWN** from the watch face to view the VIRB widget.
3 Wait while the device connects to your VIRB camera.
4 Select ▲.
5 Select an option:
   - To record video, select **Start Recording**.
     The video counter appears on the fēnix screen.
   - To take a photo while recording video, select **DOWN**.
   - To stop recording video, select ▲.
   - To take a photo, select **Take Photo**.
   - To change video and photo settings, select **Settings**.

**Controlling a VIRB Action Camera During an Activity**
Before you can use the VIRB remote function, you must enable the remote setting on your VIRB camera. See the **VIRB Series Owner's Manual** for more information. You must also set the
Customizing Your Device

Customizing the Watch Face
You can customize the appearance of the watch face by selecting the layout, colors, and additional data. You can also download custom watch faces from the Connect IQ store.

Customizing the Controls Menu
You can add, remove, and change the order of the shortcut menu options in the controls menu (Viewing the Controls Menu, page 1).

Using the Stress Level Widget
The stress level widget displays your current stress level and a graph of your stress level for the last four hours. It can also guide you through a breathing activity to help you relax.

Customizing the Compass Menu
Hold MENU, and select Settings > Compass.

Dial:
Sets the dial style for the compass.

Hands:
Sets the hands style for the compass.

Layout:
Sets the layout style for the compass.

Data:
Sets the data style for the compass.

Accent Color:
Sets the accent color for the compass.

Bkgd. Color:
Sets the background color for the compass.

TIP: Move your wrist in a small figure eight motion until a message appears.
Setting the North Reference
You can set the directional reference used in calculating heading information.
1. Hold MENU.
2. Select Settings > Sensors & Accessories > Compass > North Ref.
3. Select an option:
   - To set geographic north as the heading reference, select True.
   - To set the magnetic declination for your location automatically, select Magnetic.
   - To set grid north (000°) as the heading reference, select Grid.
   - To set the magnetic variation value manually, select User, enter the magnetic variance, and select Done.

Altimeter Settings
Hold MENU, and select Settings > Sensors & Accessories > Altimeter.
Calibrate: Allows you to manually calibrate the altimeter sensor.
Auto Cal.: Allows the altimeter to self-calibrate each time you turn on GPS tracking.
Elevation: Sets the units of measure for elevation.

Calibrating the Barometric Altimeter
Your device was already calibrated at the factory, and the device uses automatic calibration at your GPS starting point by default. You can manually calibrate the barometric altimeter if you know the correct elevation.
1. Hold MENU.
2. Select Settings > Sensors & Accessories > Altimeter.
3. Select an option:
   - To calibrate automatically from your GPS starting point, select Auto Cal., and select an option.
   - To enter the current elevation, select Calibrate.

Barometer Settings
Hold MENU, and select Settings > Sensors & Accessories > Barometer.
Calibrate: Allows you to manually calibrate the barometer sensor.
Plot: Sets the time scale for the chart in the barometer widget.
Storm Alert: Sets the rate of barometric pressure change that triggers a storm alert.
Watch Mode: Sets the sensor used in watch mode. The Auto option uses both the altimeter and barometer according to your movement. You can use the Altimeter option when your activity involves changes in altitude, or the Barometer option when your activity does not involve changes in altitude.
Pressure: Sets how the device displays pressure data.

Calibrating the Barometer
Your device was already calibrated at the factory, and the device uses automatic calibration at your GPS starting point by default. You can manually calibrate the barometer if you know the correct elevation or the correct sea level pressure.
1. Hold MENU.
2. Select Settings > Sensors & Accessories > Barometer > Calibrate.
3. Select an option:
   - To enter the current elevation or sea level pressure, select Yes.
   - To calibrate automatically from your GPS starting point, select Use GPS.

Map Settings
You can customize how the map appears in the map app and data screens.
Hold MENU, and select Settings > Map.
Orientation: Sets the orientation of the map. The North Up option shows north at the top of the screen. The Track Up option shows your current direction of travel at the top of the screen.
User Locations: Shows or hides saved locations on the map.
Auto Zoom: Automatically selects the zoom level for optimal use of your map. When disabled, you must zoom in or out manually.

GroupTrack Settings
Hold MENU, and select Settings > GroupTrack.
Show on Map: Enables you to view connections on the map screen during a GroupTrack session.
Activity Types: Allows you to select which activity types appear on the map screen during a GroupTrack session.

Navigation Settings
You can customize the map features and appearance when navigating to a destination.

Customizing Map Features
1. Hold MENU.
2. Select Settings > Navigation > Data Screens.
3. Select an option:
   - Select Map to turn on or off the map.
   - Select Guide to turn on or off the guide screen that displays the compass bearing or course to follow while navigating.
   - Select Elevation Plot to turn on or off the elevation plot.
   - Select a screen to add, remove, or customize.

Heading Settings
You can set the behavior of the pointer that appears when navigating.
Hold MENU, and select Settings > Navigation > Type.
Bearing: Points in the direction of your destination.
Course: Shows your relationship to the course line leading to the destination (Course Pointer, page 26).

Course Pointer
The course pointer is most useful when you are navigating to your destination in a straight line, such as when you are navigating on water. It can help you navigate back to the course line when you go off-course to avoid obstacles or hazards.

The course pointer indicates your relationship to the course line leading to the destination. The course deviation indicator (CDI) provides the indication of drift (right or left) from the course. The dots tell you how far off course you are.

Setting Up a Heading Bug
You can set up a heading indicator to display on your data pages while navigating. The indicator points to your target heading.
1 Hold MENU.
2 Select Settings > Navigation > Heading Bug.

Setting Navigation Alerts
You can set alerts to help you navigate to your destination.
1 Hold MENU.
2 Select Settings > Navigation > Alerts.
3 Select an option:
   • To set an alert for a specified distance from your final destination, select Final Distance.
   • To set an alert for the estimated time remaining until you reach your final destination, select Final ETE.
   • To set an alert when you stray from the course, select Off Course.
4 If necessary, select Status to turn on the alert.
5 If necessary, enter a distance or time value, and select ✔.

System Settings
Hold MENU, and select Settings > System.

Language: Sets the language displayed on the device.
Time: Adjusts the time settings (Time Settings, page 27).
Backlight: Adjusts the backlight settings (Changing the Backlight Settings, page 27).
Sounds: Sets the device sounds, such as key tones, alerts, and vibrations.
Do Not Disturb: Turns on or off do not disturb mode. Use the Sleep Time option to turn on do not disturb mode automatically during your normal sleep hours. You can set your normal sleep hours on your Garmin Connect account.
Hot Keys: Allows you to assign shortcuts to device keys (Customizing the Hot Keys, page 27).
Auto Lock: Allows you to lock the keys automatically to prevent accidental key presses. Use the During Activity option to lock the keys during a timed activity. Use the Not During Activity option to lock the keys when you are not recording a timed activity.
Units: Sets the units of measure used on the device (Changing the Units of Measure, page 27).
Format: Sets general format preferences, such as the pace and speed shown during activities, the start of the week, and geographical position format and datum options.
Data Recording: Sets how the device records activity data. The Smart recording option (default) allows for longer activity recordings. The Every Second recording option provides more detailed activity recordings, but may not record entire activities that last for longer periods of time.
USB Mode: Sets the device to use mass storage mode or Garmin mode when connected to a computer.
Restore Defaults: Allows you to reset user data and settings (Restoring All Default Settings, page 30).
Software Update: Allows you to install software updates downloaded using Garmin Express.

Time Settings
Hold MENU, and select Settings > System > Time.

Time Format: Sets the device to show time in a 12-hour, 24-hour, or military format.
Set Time: Sets the time zone automatically based on your GPS position.
Time: Allows you to adjust the time if it is set to the Manual option.
Alerts: Allows you to set hourly alerts, as well as sunrise and sunset alerts that sound a specific number of minutes or hours before the actual sunrise or sunset occurs.

Sync With GPS: Allows you to manually sync the time with GPS when you change time zones, and to update for daylight saving time.

Changing the Backlight Settings
1 Hold MENU.
2 Select Settings > System > Backlight.
3 Select an option:
   • Select During Activity.
   • Select Not During Activity.
4 Select an option:
   • Select Keys to turn on the backlight for key presses.
   • Select Alerts to turn on the backlight for alerts.
   • Select Gesture to turn on the backlight by raising and turning your arm to look at your wrist.
   • Select Timeout to set the length of time before the backlight turns off.
   • Select Brightness to set the brightness level of the backlight.

Customizing the Hot Keys
You can customize the hold function of individual keys and combinations of keys.
1 Hold MENU.
2 Select Settings > System > Hot Keys.
3 Select a key or combination of keys to customize.
4 Select a function.

Changing the Units of Measure
You can customize units of measure for distance, pace and speed, elevation, weight, height, and temperature.
1 Hold MENU.
2 Select Settings > System > Units.
3 Select a measurement type.
4 Select a unit of measure.

Viewing Device Information
You can view device information, such as the unit ID, software version, regulatory information, and license agreement.
1 Hold MENU.
2 Select Settings > About.

Viewing E-label Regulatory and Compliance Information
The label for this device is provided electronically. The e-label may provide regulatory information, such as identification numbers provided by the FCC or regional compliance markings, as well as applicable product and licensing information.
1 Hold MENU.
2 From the settings menu, select About.

Wireless Sensors
Your device can be used with wireless ANT+ or Bluetooth sensors. For more information about compatibility and purchasing optional sensors, go to buy.garmin.com.

Pairing Your Wireless Sensors
The first time you connect a wireless sensor to your device using ANT+ or Bluetooth technology, you must pair the device and sensor. After they are paired, the device connects to the sensor automatically when you start an activity and the sensor is active and within range.
NOTE: If a heart rate monitor was bundled with your device, the included heart rate monitor is already paired with your device.
1. If you are pairing a heart rate monitor, put on the heart rate monitor (Putting On the Heart Rate Monitor, page 9).
   The heart rate monitor does not send or receive data until you put it on.
2. Bring the device within 3 m (10 ft.) of the sensor.
   NOTE: Stay 10 m (33 ft.) away from other wireless sensors while pairing.
3. Hold MENU.
5. Select an option:
   • Select Search All.
   • Select your sensor type.
   After the sensor is paired with your device, the sensor status changes from Searching to Connected. Sensor data appears in the data screen loop or a custom data field.

Extended Display Mode
You can use Extended Display mode to display data screens from your fēnix device on a compatible Edge device during a ride or triathlon. See your Edge owner's manual for more information.

Using an Optional Bike Speed or Cadence Sensor
You can use a compatible bike speed or cadence sensor to send data to your device.
• Pair the sensor with your device (Pairing Your Wireless Sensors, page 27).
• Set your wheel size (Wheel Size and Circumference, page 35).
• Go for a ride (Starting an Activity, page 2).

Training with Power Meters
Go to www.garmin.com/intosports for a list of ANT+ sensors that are compatible with your device (such as Vector™).
• For more information, see the owner's manual for your power meter.
• Adjust your power zones to match your goals and abilities (Setting Your Power Zones, page 15).
• Use range alerts to be notified when you reach a specified power zone (Setting an Alert, page 22).
• Customize the power data fields (Customizing the Data Screens, page 22).

Using Electronic Shifters
Before you can use compatible electronic shifters, such as Shimano® Di2™ shifters, you must pair them with your device (Pairing Your Wireless Sensors, page 27). You can customize the optional data fields (Customizing the Data Screens, page 22). The fēnix 5/5S device displays current adjustment values when the sensor is in adjustment mode.

Situational Awareness
Your fēnix device can be used with the Varia Vision™ device, Varia™ smart bike lights, and rearview radar to improve situational awareness. See the owner's manual for your Varia device for more information.
NOTE: You may need to update the fēnix software before pairing Varia devices (Updating the Software Using Garmin Connect Mobile, page 7).

Foot Pod
Your device is compatible with the foot pod. You can use the foot pod to record pace and distance instead of using GPS when you are training indoors or when your GPS signal is weak. The foot pod is on standby and ready to send data (like the heart rate monitor).
After 30 minutes of inactivity, the foot pod powers off to conserve the battery. When the battery is low, a message appears on your device. Approximately five hours of battery life remain.

Improving Foot Pod Calibration
Before you can calibrate your device, you must acquire GPS signals and pair your device with the foot pod (Pairing Your Wireless Sensors, page 27).
The foot pod is self-calibrating, but you can improve the accuracy of the speed and distance data with a few outdoor runs using GPS.
1. Stand outside for 5 minutes with a clear view of the sky.
2. Start a running activity.
3. Run on a track without stopping for 10 minutes.
4. Stop your activity, and save it.
   Based on the recorded data, the foot pod calibration value changes, if necessary. You should not need to calibrate the foot pod again unless your running style changes.

Calibrating Your Foot Pod Manually
Before you can calibrate your device, you must pair your device with the foot pod sensor (Pairing Your Wireless Sensors, page 27).
Manual calibration is recommended if you know your calibration factor. If you have calibrated a foot pod with another Garmin product, you may know your calibration factor.
1. Hold MENU.
2. Select Settings > Sensors & Accessories.
3. Select your foot pod.
5. Adjust the calibration factor:
   • Increase the calibration factor if your distance is too low.
   • Decrease the calibration factor if your distance is too high.

Setting Foot Pod Speed and Distance
Before you can customize the foot pod speed and distance, you must pair your device with the foot pod sensor (Pairing Your Wireless Sensors, page 27).
You can set your device to calculate speed and distance using your foot pod data instead of GPS data.
1. Hold MENU.
2. Select Settings > Sensors & Accessories.
3. Select your foot pod.
4. Select Speed or Distance.
5. Select an option:
   • Select Indoor when you are training with GPS turned off, usually indoors.
   • Select Always to use your foot pod data regardless of the GPS setting.

tempe™
The tempe is an ANT+ wireless temperature sensor. You can attach the sensor to a secure strap or loop where it is exposed to ambient air, and therefore, provides a consistent source of accurate temperature data. You must pair the tempe with your device to display temperature data from the tempe.

Deleting Files

**NOTICE**
If you do not know the purpose of a file, do not delete it. Your device memory contains important system files that should not be deleted.

1. Open the Garmin drive or volume.
2. If necessary, open a folder or volume.
4. Press the Delete key on your keyboard.

**NOTE:** If you are using an Apple computer, you must empty the Trash folder to completely remove the files.

Device Maintenance

Device Care

**NOTICE**
Do not use a sharp object to clean the device.

Avoid chemical cleaners, solvents, and insect repellents that can damage plastic components and finishes.

Thoroughly rinse the device with fresh water after exposure to chlorine, salt water, sunscreen, cosmetics, alcohol, or other harsh chemicals. Prolonged exposure to these substances can damage the case.

Avoid pressing the keys under water.

Keep the leather band dry. Avoid swimming or showering with the leather band. Exposure to water can damage the leather band.

Avoid extreme shock and harsh treatment, because it can degrade the life of the product.

Do not store the device where prolonged exposure to extreme temperatures can occur, because it can cause permanent damage.

Cleaning the Device

**NOTICE**
Even small amounts of sweat or moisture can cause corrosion of the electrical contacts when connected to a charger. Corrosion can prevent charging and data transfer.

1. Wipe the device using a cloth dampened with a mild detergent solution.
2. Wipe it dry.

After cleaning, allow the device to dry completely.

**TIP:** For more information, go to www.garmin.com/fitandcare.

Cleaning the Leather Bands

1. Wipe the leather bands with a dry cloth.
2. Use a leather conditioner to clean the leather bands.

Changing the QuickFit™ Bands

1. Slide the latch on the QuickFit band, and remove the band from the watch.

---

¹ The device withstands pressure equivalent to a depth of 100 m. For more information, go to www.garmin.com/waterating.
² The device withstands pressure equivalent to a depth of 50 m. For more information, go to www.garmin.com/waterating.
Align the new band with the watch.
3 Press the band into place.
   NOTE: Make sure the band is secure. The latch should close over the watch pin.
4 Repeat steps 1 through 3 to change the other band.

Metal Watch Band Adjustment
If your watch includes a metal watch band, you should take your watch to a jeweler or other professional to adjust the length of the metal band.

Replacing the Heart Rate Monitor Battery
1 Remove the sleeve from the heart rate monitor module.
2 Use a small Phillips (00) screwdriver to remove the four screws on the front of the module.
3 Remove the cover and battery.
4 Wait 30 seconds.
5 Insert the new battery under the two plastic tabs with the positive side facing up.
   NOTE: Do not damage or lose the O-ring gasket. The O-ring gasket should remain around the outside of the raised plastic ring.
6 Replace the front cover and the four screws. Observe the orientation of the front cover. The raised screw should fit in the matching raised screw hole on the front cover.
   NOTE: Do not overtighten.
7 Replace the sleeve.
   After you replace the heart rate monitor battery, you may need to pair it with the device again.

Troubleshooting

My device is in the wrong language
You can change the device language selection if you have accidentally selected the wrong language on the device.
1 Hold MENU.
2 Scroll down to the last item in the list, and select ▲.
3 Scroll down to the second to last item in the list, and select ▲.
4 Select ▲.
5 Select your language.

Is my smartphone compatible with my device?
The fenix 5/5S device is compatible with smartphones using Bluetooth wireless technology.
   Go to www.garmin.com/ble for compatibility information.

My phone will not connect to the device
If your phone will not connect to the device, you can try these tips.
   • Turn off your smartphone and your device, and turn them back on again.
   • Enable Bluetooth technology on your smartphone.
   • Update the Garmin Connect Mobile app to the latest version.
   • Remove your device from the Garmin Connect Mobile app to retry the pairing process.
   If you are using an Apple device, you should also remove your device from the Bluetooth settings on your smartphone.
   • Bring your smartphone within 10 m (33 ft.) of the device.
   • On your smartphone, open the Garmin Connect Mobile app, select or , and select Garmin Devices > Add Device to enter pairing mode.
   • On your device, hold LIGHT, and select ▼ to turn on Bluetooth technology and enter pairing mode.

Can I use my Bluetooth sensor with my watch?
The device is compatible with some Bluetooth sensors. The first time you connect a sensor to your Garmin device, you must pair the device and sensor. After they are paired, the device connects to the sensor automatically when you start an activity and the sensor is active and within range.
1 Hold MENU.
2 Select Settings > Sensors & Accessories > Add New.
3 Select an option:
   • Select Search All.
   • Select your sensor type.
   You can customize the optional data fields (Customizing the Data Screens, page 22).

Restarting Your Device
1 Hold LIGHT until the device turns off.
2 Hold LIGHT to turn on the device.

Restoring All Default Settings
NOTE: This deletes all user-entered information and activity history.
You can restore all of the device settings to the factory default values.
1 Hold MENU.
Acquiring Satellite Signals

The device may need a clear view of the sky to acquire satellite signals. The time and date are set automatically based on the GPS position.

1. Go outdoors to an open area.
   - The front of the device should be oriented toward the sky.

2. Wait while the device locates satellites.
   - It may take 30–60 seconds to locate satellite signals.

Improving GPS Satellite Reception

- Frequently sync the device to your Garmin Connect account:
  - Connect your device to a computer using the USB cable and the Garmin Express application.
  - Sync your device to the Garmin Connect Mobile app using your Bluetooth enabled smartphone.
  - Connect your device to your Garmin Connect account using a Wi-Fi wireless network.

While connected to your Garmin Connect account, the device downloads several days of satellite data, allowing it to quickly locate satellite signals.

- Take your device outside to an open area away from tall buildings and trees.
- Remain stationary for a few minutes.

The temperature reading is not accurate

Your body temperature affects the temperature reading for the internal temperature sensor. To get the most accurate temperature reading, you should remove the watch from your wrist and wait 20 to 30 minutes.

You can also use an optional tempe external temperature sensor to view accurate ambient temperature readings while wearing the watch.

Maximizing the Battery Life

You can do several things to extend the life of the battery:

- Reduce the backlight timeout (Changing the Backlight Settings, page 27).
- Reduce the backlight brightness.
- Use UltraTrac GPS mode for your activity (UltraTrac, page 23).
- Turn off Bluetooth wireless technology when you are not using connected features (Connected Features, page 5).
- When pausing your activity for a longer period of time, use the resume later option (Stopping an Activity, page 2).
- Turn off activity tracking (Turning Off Activity Tracking, page 16).
- Use a watch face that is not updated every second.
  - For example, use a watch face without a second hand (Customizing the Watch Face, page 25).
- Limit the smartphone notifications the device displays (Managing Notifications, page 6).
- Stop broadcasting heart rate data to paired Garmin devices (Broadcasting Heart Rate Data to Garmin Devices, page 8).
- Turn off wrist-based heart rate monitoring (Turning Off the Wrist-based Heart Rate Monitor, page 9).

NOTE: Wrist-based heart rate monitoring is used to calculate vigorous intensity minutes and calories burned.

Activity Tracking

For more information about activity tracking accuracy, go to garmin.com/ataccuracy.

My daily step count does not appear

The daily step count is reset every night at midnight.

- If dashes appear instead of your step count, allow the device to acquire satellite signals and set the time automatically.

My step count does not seem accurate

If your step count does not seem accurate, you can try these tips:

- Wear the device on your non-dominant wrist.
- Carry the device in your pocket when pushing a stroller or lawn mower.
- Carry the device in your pocket when actively using your hands or arms only.

NOTE: The device may interpret some repetitive motions, such as washing dishes, folding laundry, or clapping your hands, as steps.

The step counts on my device and my Garmin Connect account don’t match

The step count on your Garmin Connect account updates when you synchronize your device.

1. Select an option:
   - Synchronize your step count with the Garmin Connect application (Using Garmin Connect on Your Computer, page 7).
   - Synchronize your step count with the Garmin Connect Mobile app (Manually Syncing Data with Garmin Connect Mobile, page 7).

2. Wait while the device synchronizes your data.
   - Synchronizing can take several minutes.

NOTE: Refreshing the Garmin Connect Mobile app or the Garmin Connect application does not synchronize your data or update your step count.

The floors climbed amount does not seem accurate

Your device uses an internal barometer to measure elevation changes as you climb floors. A floor climbed is equal to 3 m (10 ft.).

- Avoid holding handrails or skipping steps while climbing stairs.
- In windy environments, cover the device with your sleeve or jacket as strong gusts can cause erratic readings.

My intensity minutes are flashing

When you exercise at an intensity level that qualifies toward your intensity minutes goal, the intensity minutes flash.

- Exercise for at least 10 consecutive minutes at a moderate or vigorous intensity level.

Getting More Information

You can find more information about this product on the Garmin website.

- Go to support.garmin.com for additional manuals, articles, and software updates.
- Go to www.garmin.com/outdoor.
- Go to http://buy.garmin.com, or contact your Garmin dealer for information about optional accessories and replacement parts.

Data Fields

%FTP: The current power output as a percentage of functional threshold power.

Appendix
%HRR: The percentage of heart rate reserve (maximum heart rate minus resting heart rate).

10s Avg. Power: The 10-second moving average of power output.

10s Avg Balance: The 10-second moving average of the left/right power balance.

24-Hour Max.: The maximum temperature recorded in the last 24 hours from a compatible temperature sensor.

24-Hour Min.: The minimum temperature recorded in the last 24 hours from a compatible temperature sensor.

30s Avg. Power: The 30-second moving average of power output.

30s Avg Balance: The 30-second moving average of the left/right power balance.

3s Avg. Balance: The three-second moving average of the left/right power balance.

3s Avg. Power: The 3-second moving average of power output.

500m Pace: The current rowing pace per 500 meters.

Aerobic TE: The impact of the current activity on your aerobic fitness level.

Anaerobic TE: The impact of the current activity on your anaerobic fitness level.

Average HR: The average heart rate for the current activity.

Average Pace: The average pace for the current activity.

Average Power: The average power output for the current activity.

Average Swolf: The average swolf score for the current activity. Your swolf score is the sum of the time for one length plus the number of strokes for that length (Swim Terminology, page 4). In open water swimming, 25 meters is used to calculate your swolf score.

Avg. %HRR: The average percentage of heart rate reserve (maximum heart rate minus resting heart rate) for the current activity.

Avg. 500m Pace: The average rowing pace per 500 meters for the current activity.

Avg. Ascent: The average vertical distance of ascent since the last reset.

Avg. Balance: The average left/right power balance for the current activity.

Avg. Cadence: Cycling. The average cadence for the current activity.

Avg. Cadence: Running. The average cadence for the current activity.

Avg. Descent: The average vertical distance of descent since the last reset.

Avg. GCT Bal.: The average ground contact time balance for the current session.

Avg. L. PP: The average power phase angle for the left leg for the current activity.

Avg. L. PPP: The average power phase peak angle for the left leg for the current activity.

Avg. Lap Time: The average lap time for the current activity.

Avg. Moving Speed: The average speed when moving for the current activity.

Avg. Nautical Speed: The average speed in knots for the current activity.

Avg. Overall Speed: The average speed for the current activity, including both moving and stopped speeds.

Avg. PCO: The average platform center offset for the current activity.

Avg. R. PP: The average power phase angle for the right leg for the current activity.

Avg. R. PPP: The average power phase peak angle for the right leg for the current activity.

Avg. Speed: The average speed for the current activity.

Avg. Stride Len.: The average stride length for the current session.

Avg. Strk/len: The average number of strokes per pool length during the current activity.

Avg. Strk Rate: Paddle sports. The average number of strokes per minute (spm) during the current activity.

Avg. Vert. Osc.: The average amount of vertical oscillation for the current activity.

Avg. Vert. Ratio: The average ratio of vertical oscillation to stride length for the current session.

Avg Dist Per Stk: Swimming. The average distance traveled per stroke during the current activity.

Avg Dist Per Stk: Paddle sports. The average distance traveled per stroke during the current activity.

Avg GCT: The average amount of ground contact time for the current activity.

Avg HR %Max.: The average percentage of maximum heart rate for the current activity.

Balance: The current left/right power balance.

Battery Level: The remaining battery power.

Bearing: The direction from your current location to a destination. You must be navigating for this data to appear.

Cadence: Cycling. The number of revolutions of the crank arm. Your device must be connected to a cadence accessory for this data to appear.

Cadence: Running. The steps per minute (right and left).

Calories: The amount of total calories burned.

Compass Hdg.: The direction you are moving based on the compass.

Course: The direction from your starting location to a destination. Course can be viewed as a planned or set route. You must be navigating for this data to appear.

Dest. Location: The position of your final destination.

Dest. Wpt: The last point on the route to the destination. You must be navigating for this data to appear.

Di2 Battery: The remaining battery power of a Di2 sensor.

Dist. Per Stroke: Paddle sports. The distance traveled per stroke.

Dist. Remaining: The remaining distance to the final destination. You must be navigating for this data to appear.

Distance: The distance traveled for the current track or activity.

Distance To Next: The remaining distance to the next waypoint on the route. You must be navigating for this data to appear.

Elapsed Time: The total time recorded. For example, if you start the timer and run for 10 minutes, then stop the timer for 5 minutes, then start the timer and run for 20 minutes, your elapsed time is 35 minutes.

Elevation: The altitude of your current location above or below sea level.

Estimated Total Distance: The estimated distance from the start to the final destination. You must be navigating for this data to appear.

ETA: The estimated time of day when you will reach the final destination (adjusted to the local time of the destination). You must be navigating for this data to appear.
ETA at Next: The estimated time of day when you will reach the
next waypoint on the route (adjusted to the local time of the
waypoint). You must be navigating for this data to appear.

ETE: The estimated time remaining until you reach the final
destination. You must be navigating for this data to appear.

Floors Climbed: The total number of floors climbed up for the
day.

Floors Descended: The total number of floors climbed down for
the day.

Floors per Minute: The number of floors climbed up per minute.

Front: The front bike gear from a gear position sensor.

GCT: The amount of time in each step that you spend on the
ground while running, measured in milliseconds. Ground
contact time is not calculated while walking.

GCT Balance: The left/right balance of ground contact time
while running.

Gear Battery: The battery status of a gear position sensor.

Gear Combo: The current gear combination from a gear
position sensor.

Gear Ratio: The number of teeth on the front and rear bike
gears, as detected by a gear position sensor.

Gears: The front and rear bike gears from a gear position
sensor.

Glide Ratio: The ratio of horizontal distance traveled to the
change in vertical distance.

Glide Ratio Dest.: The glide ratio required to descend from your
current position to the destination elevation. You must be
navigating for this data to appear.

GPS: The strength of the GPS satellite signal.

GPS Elevation: The altitude of your current location using GPS.

GPS Heading: The direction you are moving based on GPS.

Grade: The calculation of rise (elevation) over run (distance).
For example, if for every 3 m (10 ft.) you climb you travel
60 m (200 ft.), the grade is 5%.

Heading: The direction you are moving.

Heart Rate: Your heart rate in beats per minute (bpm). Your
device must be connected to a compatible heart rate monitor.

HR %Max.: The percentage of maximum heart rate.

HR Zone: The current range of your heart rate (1 to 5). The
default zones are based on your user profile and maximum
heart rate (220 minus your age).

Int. Avg. %HRR: The average percentage of heart rate reserve
(maximum heart rate minus resting heart rate) for the current
swim interval.

Int. Avg. %Max.: The average percentage of maximum heart
rate for the current swim interval.

Int. Avg. HR: The average heart rate for the current swim
interval.

Int. Distance: The distance traveled for the current interval.

Int. Max. %HRR: The maximum percentage of heart rate
reserve (maximum heart rate minus resting heart rate) for the
current swim interval.

Int. Max. %Max.: The maximum percentage of maximum heart
rate for the current swim interval.

Int. Max. HR: The maximum heart rate for the current swim
interval.

Int. Pace: The average pace for the current interval.

Int. Swolf: The average swolf score for the current interval.

Intensity Factor: The Intensity Factor™ for the current activity.

Interval Lengths: The number of pool lengths completed during
the current interval.

Interval Time: The stopwatch time for the current interval.

Int Strk/Len: The average number of strokes per pool length
during the current interval.

Int Strk Rate: The average number of strokes per minute (spm)
during the current interval.

Int Strk Type: The current stroke type for the interval.

L. Lap HR %Max.: The average percentage of maximum heart
rate for the last completed lap.

L. Lap Stk. Rate: Swimming. The average number of strokes
per minute (spm) during the last completed lap.

L. Lap Stk. Rate: Paddle sports. The average number of
strokes per minute (spm) during the last completed lap.

L. Lap Strokes: Swimming. The total number of strokes for the
last completed lap.

L. Lap Strokes: Paddle sports. The total number of strokes for
the last completed lap.

L. Lap Swolf: The swolf score for the last completed lap.

L. Len. Stk. Rate: The average number strokes per minute
(spm) during the last completed pool length.

L. Len. Stk. Rate: The stroke type used during the last
completed pool length.

L. Len. Strokes: The total number of strokes for the last
completed pool length.

Lap %HRR: The average percentage of heart rate reserve
(maximum heart rate minus resting heart rate) for the current
lap.

Lap 500m Pace: The average rowing pace per 500 meters for
the current lap.

Lap Ascent: The vertical distance of ascent for the current lap.

Lap Balance: The average left/right power balance for the
current lap.

Lap Cadence: Cycling. The average cadence for the current
lap.

Lap Cadence: Running. The average cadence for the current
lap.

Lap Descent: The vertical distance of descent for the current
lap.

Lap Distance: The distance traveled for the current lap.

Lap Dist Per Stk: Swimming. The average distance traveled per
stroke during the current lap.

Lap Dist Per Stk: Paddle sports. The average distance traveled
per stroke during the current lap.

Lap GCT: The average amount of ground contact time for the
current lap.

Lap GCT Bal.: The average ground contact time balance for the
current lap.

Lap HR: The average heart rate for the current lap.

Lap HR %Max.: The average percentage of maximum heart
rate for the current lap.

Lap L. PP: The average power phase angle for the left leg for
the current lap.

Lap L. PPP: The average power phase peak angle for the left
leg for the current lap.

Lap L. PPP: The average Normalized Power for the current lap.

Lap NP: The average Normalized Power for the current lap.

Lap Pace: The average pace for the current lap.

Lap PPC: The average power phase angle for the current lap.

Lap PPP: The average power phase peak angle for the right
leg for the current lap.

Laps: The number of laps completed for the current activity.
Lap Speed: The average speed for the current lap.
Lap Stride Len.: The average stride length for the current lap.
Lap Strk Rate: Swimming. The average number of strokes per minute (spm) during the current lap.
Lap Strk Rate: Paddle sports. The average number of strokes per minute (spm) during the current lap.
Lap Strokes: Swimming. The total number of strokes for the current lap.
Lap Strokes: Paddle sports. The total number of strokes for the current lap.
Lap Swolf: Swimming. The total number of strokes for the current lap.
Last Lap %HRR: The average percentage of heart rate reserve (maximum heart rate minus resting heart rate) for the last completed lap.
Last Lap Ascent: The vertical distance of ascent for the last completed lap.
Last Lap Cad.: Cycling. The average cadence for the last completed lap.
Last Lap Cad.: Running. The average cadence for the last completed lap.
Last Lap Descent: The vertical distance of descent for the last completed lap.
Last Lap Dist.: The distance traveled for the last completed lap.
Last Lap NP: The average Normalized Power for the last completed lap.
Last Lap Pace: The average pace for the last completed lap.
Last Lap Power: The average power output for the last completed lap.
Last Lap Speed: The average speed for the last completed lap.
Last Len. Pace: The average pace for your last completed pool length.
Last Len. Swolf: The swolf score for the last completed pool length.
Lat/Lon: The current position in latitude and longitude regardless of the selected position format setting.
Left PP: The current power phase angle for the left leg. Power phase is the pedal stroke region where positive power is produced.
Left PPP: The current power phase peak angle for the left leg. Power phase peak is the angle range over which the rider produces the peak portion of the driving force.
Lengths: The number of pool lengths completed during the current activity.
LL 500m Pace: The average rowing pace per 500 meters for the last lap.
L Lap Dist P Stk: Swimming. The average distance traveled per stroke during the last completed lap.
L Lap Dist P Stk: Paddle sports. The average distance traveled per stroke during the last completed lap.
Location: The current position using the selected position format setting.
Max. Ascent: The maximum rate of ascent in feet per minute or meters per minute since the last reset.
Max. Descent: The maximum rate of descent in meters per minute or feet per minute since the last reset.
Max. Elevation: The highest elevation reached since the last reset.
Max. Lap Power: The top power output for the current lap.
Max. Nautical Speed: The maximum speed in knots for the current activity.
Maximum Speed: The top speed for the current activity.
Max Power: The top power output for the current activity.
Min. Elevation: The lowest elevation reached since the last reset.
Moving Time: The total time moving for the current activity.
Multisport Time: The total time for all sports in a multisport activity, including transitions.
Muscle O2 Sat. %: The estimated muscle oxygen saturation percentage for the current activity.
Nautical Dist: The distance traveled in nautical meters or nautical feet.
Nautical Speed: The current speed in knots.
Next Waypoint: The next point on the route. You must be navigating for this data to appear.
NP: The Normalized Power™ for the current activity.
Off Course: The distance to the left or right by which you have strayed from the original path of travel. You must be navigating for this data to appear.
Pace: The current pace.
PCO: The platform center offset. Platform center offset is the location on the pedal platform where force is applied.
Pedal Smooth.: The measurement of how evenly a rider is applying force to the pedals throughout each pedal stroke.
Perform. Cond.: The performance condition score is a real-time assessment of your ability to perform.
Power: The current power output in watts.
Power to Weight: The current power measured in watts per kilogram.
Power Zone: The current range of power output (1 to 7) based on your FTP or custom settings.
Rear: The rear bike gear from a gear position sensor.
Repeat On: The timer for the last interval plus the current rest (pool swimming).
Reps: During a strength training activity, the number of repetitions in a workout set.
Rest Timer: The timer for the current rest (pool swimming).
Right PP: The current power phase angle for the right leg. Power phase is the pedal stroke region where positive power is produced.
Right PPP: The current power phase peak angle for the right leg. Power phase peak is the angle range over which the rider produces the peak portion of the driving force.
Set Timer: During a strength training activity, the amount of time spent in the current workout set.
Speed: The current rate of travel.
Stopped Time: The total time stopped for the current activity.
Stride Length: The length of your stride from one footfall to the next, measured in meters.
Stroke Rate: Swimming. The number of strokes per minute (spm).
Stroke Rate: Paddle sports. The number of strokes per minute (spm).
Strokes: Swimming. The total number of strokes for the current activity.
Strokes: Paddle sports. The total number of strokes for the current activity.
Sunrise: The time of sunrise based on your GPS position.
Sunset: The time of sunset based on your GPS position.
Temperature: The temperature of the air. Your body temperature affects the temperature sensor. You can pair a temp sensor with your device to provide a consistent source of accurate temperature data.
Time in Zone: The time elapsed in each heart rate or power zone.
Time of Day: The time of day based on your current location and time settings (format, time zone, daylight saving time).
Timer: The current time of the countdown timer.
Time Seat.: The time spent seated while pedaling for the current activity.
Time Seat. Lap: The time spent seated while pedaling for the current lap.
Time Stand.: The time spent standing while pedaling for the current activity.
Time Stand. Lap: The time spent standing while pedaling for the current lap.
Time to Next: The estimated time remaining before you reach the next waypoint in the route. You must be navigating for this data to appear.
Torque Eff.: The measurement of how efficiently a rider is pedaling.

**Total Ascent**: The total elevation distance ascended since the last reset.
**Total Descent**: The total elevation distance descended since the last reset.
**Total Hemoglobin**: The estimated muscle oxygen total for the current activity.
**TSS**: The Training Stress Score™ for the current activity.
**V Dist to Dest**: The elevation distance between your current position and the final destination. You must be navigating for this data to appear.
**Vert. Spd.**: The rate of ascent or descent over time.
**Vertical Osc.**: The amount of bounce while you are running. The vertical motion of your torso, measured in centimeters for each step.
**Vertical Ratio**: The ratio of vertical oscillation to stride length.
**Vert Spd to Tgt**: The rate of ascent or descent to a predetermined altitude. You must be navigating for this data to appear.
**VMG**: The speed at which you are closing on a destination along a route. You must be navigating for this data to appear.
**Work**: The accumulated work performed (power output) in kilojoules.

### VO2 Max. Standard Ratings
These tables include standardized classifications for VO2 max. estimates by age and gender.

#### Males

<table>

<td>5.05 and greater</td>
<td>From 3.93 to 5.04</td>
<td>From 2.79 to 3.92</td>
<td>From 2.23 to 2.78</td>
<td>Less than 2.23</td>
</tr>
</tbody>
</table>

#### Females

<table>
<thead>
<tr>
<th>Watts per Kilogram (W/kg)</th>
<th>Superior</th>
<th>Excellent</th>
<th>Good</th>
<th>Fair</th>
<th>Untrained</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>4.30 and greater</td>
<td>From 3.33 to 4.29</td>
<td>From 2.36 to 3.32</td>
<td>From 1.90 to 2.35</td>
<td>Less than 1.90</td>
</tr>
</tbody>
</table>

FTP ratings are based on research by Hunter Allen and Andrew Coggan, PhD, *Training and Racing with a Power Meter* (Boulder, CO: VeloPress, 2010).

### Wheel Size and Circumference
Your speed sensor automatically detects your wheel size. If necessary, you can manually enter your wheel circumference in the speed sensor settings.

The tire size is marked on both sides of the tire. This is not a comprehensive list. You can also measure the circumference of your wheel or use one of the calculators available on the internet.

<table>
<thead>
<tr>
<th>Tire Size</th>

**Symbol Definitions**

These symbols may appear on the device or accessory labels.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>~</td>
<td>Alternating current. The device is suitable for alternating current.</td>
</tr>
<tr>
<td>!</td>
<td>Direct current. The device is suitable for direct current only.</td>
</tr>
<tr>
<td>F</td>
<td>Fuse. Indicates a fuse specification or location.</td>
</tr>
<tr>
<td>🌐</td>
<td>WEEE disposal and recycling symbol. The WEEE symbol is attached to the product in compliance with the EU directive 2012/19/EU on Waste Electrical and Electronic Equipment (WEEE). It is intended to deter the improper disposal of this product and to promote reuse and recycling.</td>
</tr>
