

When you're looking for graphical guidance both above and below the waterline, Garmin's lineup of chartplotter/sounder units can offer the perfect solution. Their compact, all-in-one design makes for easy installation on boats where space is at a premium. And the easy-to-use split-screen functionality lets you view both GPS map and sonar information at the same time. (Or you can opt for full-screen views of plotter and sounder data separately.) High-speed microprocessors deliver stunning graphics and lightning-quick redraw rates on the multi-tasking display - while available BlueChart® cartography makes it easy to track your progress in relation to surface waypoints, buoys, nav aids, shorelines and other topside features. Meanwhile, powerful built-in sounder technology lets you penetrate the depths with precision, so you can find fish or keep an eye on potentially hazardous terrain beneath your boat.

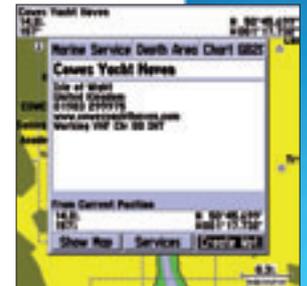

### GPSMAP 178C Sounders

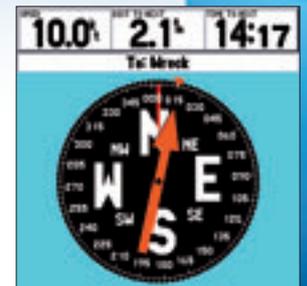

- Colour CFTN display on big 11.5 cm diagonal screen
- 200 MHz microprocessors for fast pan, zoom and map redraw rates
- Accepts BlueChart® cartography for depth contours, inter-tidal zones, nav aids, and other points of interest
- Dual- or single-frequency sounder
- 500-watts (RMS) of transmit power – dual frequency
- Exclusive See-Thru® technology
- Compatible with DSC radios
- 50 reversible routes
- 320 x 320 pixels
- Size: 12.25 cm W x 15.7 cm H
