MARCH 2024 SMARTWATCH FEATURE UPDATE

PRODUCT UPDATE

In an ongoing effort to improve our products and provide enhanced features to existing users, we are excited to announce our next feature update for smartwatches. The update provides improved functionality and new features for a variety of our fitness and outdoor products.

The free software updates have begun rolling out and will continue to do so over the coming weeks. Customers can update their smartwatch or cycling computer by enabling automatic updates from their devices or by using Garmin Express™ software.

Please see the below for a few featured highlights found in this update as well as a detailed reference table at the end of the document.

NEW FEATURES:

Notable features in this software release include:

MULTISPORT AUTO TRANSITION:

Focus on the race and let your watch take care of recording splits between swim, bike and run during multisport activities.

SLEEP COACH:

Receive a sleep score along with personalized coaching for how much sleep is recommended and keep track of different sleep stages, naps and other key metrics (measured during sleep) such as Pulse Ox¹ and heart rate variability (HRV) status.

RUNNING TRACK DATABASE:

With more than 10,000 tracks (400 meters) from all over the world, use the track run activity profile to get an accurate measurement of performance – even on a track you've never run before.

JUMP ROPE ACTIVITY:

Choose from free mode or goal mode (target time or target reps) to track duration, total reps, total rounds, round info, max streak, heart rate, calories burned and jump beats per minute. It also offers a customizable alert interval and countdown timer.

LAP UNDO:

No need to worry about accidental lap button presses any longer. With the lap undo function, you can now undo a manually recorded lap within 8 seconds of a new lap creation.

Please reference the matrix on page 2 to find out which features are coming to each Garmin device.
